

Table of Contents

	Page
A. Material and Methods	XI
B. The Submicroscopic Anatomy of the Lung	1
I. <i>The Pulmonary Alveolus</i>	2
1. Survey	1, 2
2. Alveolar Epithelial Cell, Cell Organelles	3
3. Cytoplasmic Processes of the Alveolar Epithelial Cell	4
4. Blood-Air-Pathway, Basement Membrane	5
II. <i>The Comparative Submicroscopic Anatomy of the Lung and of the Blood-Air-Pathway</i>	10
1. Gill Capillary and Gill Epithelium of the Fish	6, 7
2. Fine Structure of the Mitochondria in the Gill Epithelium	8, 9
3. Toad Lung	10
4. Cytoplasmic Inclusions in the Alveolar Epithelium of the Toad Lung	11
5. Pigeon Lung	12
III. <i>The Pulmonary Vessels</i>	24
1. Pulmonary Capillaries	24
a) Survey, Pericytes	13
b) Interdigitations of the Endothelium and the Basement Membrane	14, 15
2. Venules	16
3. Arterioles	17
4. Lymphatic Vessels	18
IV. <i>The Pulmonary Stroma</i>	34
1. Elastic Fibers	19
2. Connective Tissue Fibrils	20
3. Smooth Musculature of the Alveolar Septum	21
V. <i>The Tracheal and Bronchial Mucous Epithelium</i>	40
1. Survey	22, 23
2. Ciliated Epithelial Cells	24, 25, 26
3. Mucous Secretion	46
a) δ -Cytochromes	27
b) Lamellar Cytosomes	28
c) Goblet Cells	29
VI. <i>The Embryonal Lung</i>	52
1. Alveolar Epithelium	30a
2. Development of the Elastic Fibers and Connective Tissue Fibrils	30b
C. The Submicroscopic Pathology of the Lung	55
I. <i>The Pathology of the Mitochondria</i>	56
1. Swelling and Vacuolar Transformation of Mitochondria in the Alveolar Epithelium	56
a) After O_2 -Deficiency in Experiments at Subatmospheric Pressures	31
b) After O_2 Respiration	32
2. Lamellar Transformation of the Mitochondria in the Alveolar Epithelium after CO_2 Respiration	60
a) Survey	33
b) Beginning and Course of the Lamellar Transformation of the Mitochondria	34-37
c) End Stage of the Lamellar Transformation of the Mitochondria	38, 39
d) Extruded Degenerated Cytosomes and Lamellar-transformed Mitochondria in the Lumen of the Pulmonary Alveolus	40
3. Crystalloid Modification of the Mitochondria in the Gill Epithelium	41
4. The Cell Organelles after Inhibition of the Carbonic Anhydrase with Diamox	74
a) Mitochondria and Golgi Apparatus in the Alveolar Epithelium	42
b) Mitochondria in Erythrocytes	43
II. <i>The Pathology of the Cytosomes in the Alveolar Macrophages of the Lung</i>	78
1. Survey	44-46
2. Developmental Forms of the Cytosomes	47
3. Cytosomes with Phagocytized Substances	48
III. <i>The Experimental Lung Edema</i>	86
1. Blood-Air-Pathway in Pulmonary Edema	49, 50
2. Endothelial Vesicles	51, 52
3. Alveolar Epithelium	53, 54
IV. <i>The Pulmonary Hyaline Membranes</i>	55, 56
V. <i>Inflammatory Infiltrates of the Alveolar Septum by Plasma Cells and Eosinophilic Leucocytes</i>	100
1. Survey	57
2. Plasma Cells with Protein Crystals and Russell Bodies	58

	Fig.	Page
VI. <i>The Polymorphonuclear Leucocytic Alveolitis</i>	59	104
VII. <i>The Lung during Extra-corporeal Circulation</i>	60	106
VIII. <i>Thrombocytes and Thrombosis</i>		108
1. Thrombocytes in a Pulmonary Vein during Hibernation	61	108
2. Beginning Thrombosis in a Pulmonary Capillary	62a	110
3. Occluding Platelet Thrombus in a Pulmonary Capillary	62b	110
IX. <i>The Lung in Mitral Stenosis</i>		112
1. Pulmonary Capillaries and Blood-Air-Pathway	63, 64	112
2. Hyperplasia of the Smooth Musculature and Fibrosis of the Pulmonary Stroma	65	116
X. <i>The Ultrastructure of the Non-perfused Resting Pulmonary Capillary</i>	66	118
XI. <i>The Lung during Hibernation</i>		120
1. Survey	67, 68	120
2. Vesiculation of the Alveolar Epithelium and Capillary Endothelium	69, 70	120
3. Hypertrophy of the γ -Cytomembranes of the Golgi Apparatus of an Alveolar Epithelial Cell	71, 72a	124
4. Lamellar Transformation of the Mitochondria in the Alveolar Epithelium	72b, c	124
XII. <i>Atelectasis of the Lung</i>	73	126
XIII. <i>Experimental Acute Hyperinflation of the Lung</i>	74	128
XIV. <i>Transport and Deposition of Heavy Metals and India Ink in the Lung</i>		131
1. Adsorption of Colloidal Ferric Hydroxide in the Basal Cell Membrane of the Alveolar Epithelium	75a	131
2. Deposition of Silver Particles in the Basement Membrane of the Pulmonary Capillary (Silver Impregnation after CAJAL)	75b	131
3. Storage of Colloidal Gold and of India Ink in the Cytosomes of the Alveolar Epithelium	75c, d	131
XV. <i>The Deposition of Ferritin and Hemosiderin in Alveolar Macrophages</i>		134
1. Iron Storage in Cytosomes of a "Heart Failure Cell" in Mitral Stenosis	76a	134
2. Iron Hydroxide Micelles of Ferritin in the Cytoplasm of Alveolar Macrophages	76b-c	134
XVI. <i>The Pneumoconioses</i>		136
1. The Development of Experimental Silicotic Granulomas of the Lung		136
a) Intra-alveolar Inflammation	77	136
b) Young Silicotic Granuloma	78	138
c) Diagram of the Development of a Silicotic Granuloma	79	140
2. Lattice Structures and Myelin Lamellae in Experimental Silicotic Granulomas	80, 81a, b	142
a) Lattice Structures	82a, c	146
b) Myelin Lamellae	81c	145
3. Plasma Cells in Experimental Silicotic Granulomas	81d	145
4. Swelling of the Mitochondria in Silicosis	82b, d-f	146
5. Cytosomes with Stored Dust Particles		
6. Dust Findings in the Lung in:		
a) Biscuit Grinder	83a, b	149
b) Sand Blaster	83d, g	149
c) Stone Cutter	83e, h	149
d) Coal Miner	83f, i	150
XVII. <i>The Ultrastructure of the Pneumocystis Carinii</i>	84-86	152
XVIII. <i>Pulmonary Tuberculosis</i>		158
1. Ultrastructure of the Mycobacterium Tuberculosis in Culture and in Macrophages of the Lung	87a-g	158
2. Inflammatory Focus of a Tubercle	88a-c	160
3. Collapse of the Lung	89a	163
4. Epithelioid Cell	89b	163
5. LANGHANS' Giant Cell	89c	163
6. Tuberculous Caseation and Calcareous Crystals	90a-d	164
XIX. <i>The Ultrastructure and Development of Pathogenic Viruses of the Lung</i>		166
1. Spherical and Rod-shaped Influenza Viruses (Strain PR 8)	91	166
2. Hemagglutination, Cyto-Hemadsorption and Virus-Hemadsorption of the Influenza Virus (Type A, Strain 5794 Asia/Albany)	92, 93	170
3. Adenovirus (RI-APC-Virus, Type 3)	94	172
4. Protein Crystals in the Cell Nucleus after Infection with Adenovirus (RI-APC-Virus, Type 5)	95	174
Bibliography		177
Author Index		190
