

Contents

1. Applied anatomy—regional	1	7. Clinical features	159
Cervical	3	Neurological changes	160
Thoracic	13	Pain and tenderness	161
Lumbar	17	The autonomic nervous system in vertebral pain syndromes	176
Pelvic	29	Referred pain	189
Surface anatomy	31	Abnormalities of feeling	196
2. Applied anatomy—general	36	Changes in muscle and soft tissue	196
Articular cartilage	36	Deformity	199
Lubrication of synovial joints	36	Functional disablement	200
Vertebral movement	38	The psychological aspect of vertebral pain	202
Intervertebral foramen	53	8. Common patterns of clinical presentation	205
Biomechanics of spinal cord and meninges	56	Arthrosis and spondylosis	205
Venous drainage	62	Upper cervical region	206
Autonomic nervous system	64	Cervico-thoracic region	229
Patterns of somatic nerve root supply	69	Thoracic region	232
3. Aetiology in general terms	74	Lumbar spine and pelvis	250
4. Incidence	77	The pelvic joints	279
5. Pathological changes—general	82	Neoplasms	300
Synovial joints	82	9. Examination	303
Symphyses (Intervertebral body joints)	88	Introduction	303
Nerve root involvement	94	Regional Examination procedures	322
Soft tissues	110	Cervical region	322
Neoplasms	121	Shoulder and clavicular joints	324
6. Pathological changes—combined regional degenerative	125	Thoracic region	326
Cervical spine	125	Lumbar region	327
Cervico-thoracic region	129	Pelvic joints	328
Thoracic spine	134	Hip	334
Lumbar spine	138	Passive physiological movement tests	336
Sphincter disturbance	150	Recording examination	341
The pelvis	151	10. Assessment in examination—Prognosis	350
Serious pathology simulating musculoskeletal pain	157	11. Investigation procedures	369

12. Principles of treatment	376	Localised manipulation	463
Aims of treatment	377	Regional manipulation	464
Definition of passive movement techniques	378	Exercise	464
Manipulation in general terms	380	Contraindications	465
Grouping of techniques	388		
13. Recording treatment and clinical method	435	16. Supports and appliances and adjunct physiotherapy treatments	468
Use of technique	441		
Selection of technique	442	17. Medication and alternative methods of pain relief	483
Assessment during treatment	444		
14. Exercises	451	18. Prophylaxis	496
15. Indications for passive movement techniques and exercise	460	19. Invasive procedures	514
General indications	460	Minor procedures	514
Soft-tissue techniques	460	Major surgery with indications for seeking surgical opinion	525
Localised mobilisation	461		
Regional mobilisation	462	References	535
Stretching (A)	462		
Mechanical harness traction	462	Index	559
