

# Contents

- Preface**
- 1 Constituents of Tissues**
- The Elemental Composition of Living Matter 1.1
  - Carbohydrates and Related Substances 1.2
  - Lipids 1.9
  - Proteins and Amino Acids 1.17
  - Enzymes 1.29
  - Enzyme Kinetics 1.46
  - Enzymes as Drugs 1.50
- 2 Subcellular Organization and Cellular Metabolism**
- Structure of Cells 2.1
  - Cell Membranes 2.2
  - Membrane Permeability and Membrane Transport 2.5
  - Lysosomes 2.12
  - Carbohydrate Metabolism 2.13
  - Mitochondria and Mitochondrial Function 2.24
  - Synthesis of Lipids 2.34
  - Amino Acid Metabolism 2.37
  - Nucleic Acid Catabolism 2.43
- 3 The Nucleus, Protein Synthesis and Cell Division**
- The Nucleus 3.1
  - Ribosomes and Protein Synthesis 3.5
  - Cell Division 3.8
  - Agents Impairing Cell Growth and Multiplication 3.11
- 4 Organization, Development, Tissues and Genetic Disease**
- Organization and Organisms 4.1
  - Development 4.4
  - Types of Tissues 4.10
  - Isolated Organs, Tissues and Cells 4.17
  - Homeostasis 4.19
  - Genetic Disorders 4.20
  - Pharmacogenetics 4.28
- 5 Properties of Neurones**
- Properties of Nerve Cell Membranes 5.4
  - Nerve Metabolism 5.12
  - The Effects of Inorganic Cations on Nerve Cell Membranes 5.13
  - Voltage Clamp 5.14
  - Drugs Affecting Nerve Cell Membranes 5.14
  - Synapse and Neuro-effector Junction 5.20
- 6 The Central Nervous System**
- Anatomy of the CNS 6.3
  - Membranes and Cerebrospinal Fluid 6.11
  - Sensation 6.13
  - Nervous Control of Voluntary Muscles 6.21
  - The Electroencephalogram 6.21
  - The Reticular Formation of the Brain Stem and Thalamus 6.22
  - Sleep 6.23
  - Emotion and Behaviour 6.26
  - Learning and Memory 6.29
- 7 Anaesthesia and General Anaesthetics**
- History of Anaesthetics 7.1
  - Anaesthesia 7.1
  - Inhalation Anaesthetics 7.5
  - Intravenous Anaesthetics 7.12
  - Pre-Anaesthetic Care 7.14
  - Adjuvants to Anaesthesia 7.14
  - Neuroleptanalgesia 7.15
  - Anaesthetics for Animal Experiments 7.15
- 8 Hypnotics and Sedatives: Alcohol**
- Inorganic Bromides 8.1
  - Chloral Derivatives 8.2
  - Paraldehyde 8.3
  - Barbiturates 8.3
  - Acyloleures 8.9
  - Carbamates 8.10
  - Piperidinedione Derivatives 8.10
  - Acetylinic Carbinols and Derivatives 8.10
  - Disubstituted Quinazolones 8.11
  - Benzodiazepine Compounds 8.11
  - Aliphatic Alcohols 8.12

- 9 The Autonomic Nervous System, Neurochemical Transmission and Smooth Muscle**
- Anatomy of the Autonomic Nervous System 9.1
  - Autonomic Effector Tissues 9.4
  - Neurochemical Transmission 9.9
  - Receptors for Acetylcholine and Noradrenaline 9.14
  - Autonomic Ganglionic Synapses 9.19
  - Adrenal Medulla and other Chromaffin Cells 9.24
  - The Structure of Autonomic Postganglionic Neurones 9.25
  - Smooth Muscle 9.27
  - Disorders of Autonomic Nerves in Man 9.35
  - Effects of Drugs on Smooth Muscle 9.36
- 10 Peripheral Autonomic Cholinergic Mechanisms**
- Synthesis of Acetylcholine 10.1
  - Drugs that Impair Acetylcholine Synthesis 10.1
  - Storage of Acetylcholine 10.5
  - Release of Acetylcholine 10.5
  - Actions of Acetylcholine 10.8
  - Drugs that Stimulate Muscarinic Receptors 10.8
  - Drugs that Block Muscarinic Receptors 10.11
  - Synthetic Atropine-like Drugs 10.14
  - Drugs that Stimulate Ganglion Cells 10.17
  - Drugs that Facilitate Ganglionic Transmission 10.20
  - Drugs that Impair Ganglionic Transmission 10.21
  - Structure-Action Relationships with Cholinomimetic Drugs and the Nature of Cholinoceptive Receptors 10.24
  - Inactivation of Acetylcholine 10.31
  - Anticholinesterase Drugs 10.33
- 11 Peripheral Adrenergic Mechanisms**
- Synthesis of Catecholamines 11.1
  - Catabolism of Catecholamines 11.5
  - Binding of Adrenergic Transmitter in Storage Vesicles 11.11
  - Uptake of Noradrenaline and Related Amines into Neuronal and Extraneuronal Cells 11.14
  - Release of Transmitter from Adrenergic Neurones 11.20
  - Adrenoreceptors 11.25
  - Sympathomimetic Drugs 11.28
  - Adrenoreceptor Antagonists 11.40
- 12 Local Hormones and Autacoids: Biogenic Amines, Purines, Kinins and Prostaglandins**
- Local Hormones which also Function as Peripheral Neurohormones 12.1
  - Biogenic Amines 12.2
  - Histamine 12.3
  - Serotonin 12.16
  - Melatonin 12.21
  - Adenyl Compounds and Pharmacologically Active Endogenous Purine Derivatives 12.22
- Chapter 12 continued*
- Polypeptide Kinins 12.24
  - Kallikrein-Kallidin-Bradykinin System 12.24
  - Substance P 12.27
  - Renin-Angiotensin System 12.27
  - Prostaglandins 12.31
- 13 The Immune System and Inflammatory Mechanisms: Immunosuppressant and Anti-inflammatory Drugs**
- The Immune System 13.1
  - The Inflammatory Reaction 13.15
  - Hypersensitivity Reactions 13.23
  - Tissue Grafting and Organ Transplantation 13.28
  - Immune Tolerance 13.30
  - Autoimmune Diseases 13.31
- 14 Humoral Mechanisms in the Central Nervous System**
- Central Synapses 14.1
  - Synaptic Transmission 14.2
  - Catecholamines and Serotonin 14.8
  - Amino Acids 14.12
  - The Chemical Basis of Behaviour 14.18
- 15 Psychotropic Drugs**
- Mental Disorders 15.1
  - The Classification of Psychotropic Drugs 15.4
  - Neuroleptic Drugs 15.4
  - Thymoleptic Drugs and other Antidepressants 15.14
  - Lithium 15.20
  - Tranquillizers 15.20
  - Psychostimulants 15.24
  - Hallucinogenic and Psychotogenic Drugs 15.26
- 16 Drugs Used to Relieve Pain**
- Morphine and Related Analgesics 16.1
  - Antipyretic Analgesics 16.17
  - Phenothiazine Analgesics 16.29
  - Local Anaesthetic Drugs 16.29
  - Ethanol and Phenol 16.37
  - Counter-Irritants 16.38
  - Trigeminal Neuralgia 16.39
  - Migraine 16.39

## 17 Striated Muscle and Neuromuscular Transmission

- Muscle Fibre Structure 17.1
- The Sliding Filament Theory of Contraction 17.4
- Energy Requirements 17.7
- Effects of Inorganic Cations 17.7
- Characteristics of Striated Muscle Contraction 17.8
- Types of Muscle Fibres 17.11
- Effects of Previous Activity 17.13
- Drugs Acting Directly on Striated Muscle 17.14
- Innervation of Striated Muscle 17.17
- Physiological Muscle Contractions 17.19
- Blood Flow and Ischaemic Pain 17.19
- Neuromuscular Transmission 17.20
- Venoms and Toxins 17.29
- Drugs that Impair Neuromuscular Transmission 17.31
- Structure-Action Relationships among Drugs acting on Endplate Cholinoceptors 17.47
- Newer Neuromuscular Blocking Drugs 17.48
- Drugs that Facilitate Neuromuscular Transmission 17.49
- Some Disorders of Muscle Excitability 17.53

## 18 Central Control of Muscle Activity: Drugs Used in Spasticity, Parkinsonism and Epilepsy

- Spinal Reflexes 18.1
- Supraspinal Control of Posture and Movement 18.8
- Centrally Acting Muscle Relaxants 18.13
- Parkinson's Disease and Drugs used in its Treatment 18.17
- Epilepsy 18.25

## 19 The Endocrine System and Drugs Affecting Endocrine Function

- The Pituitary Gland 19.1
- The Thyroid Gland 19.15
- The Adrenal Glands 19.29
- Endocrine Functions of the Pancreas 19.43
- The Hormonal Regulation of Calcium and Phosphorus Homeostasis—The Parathyroid Glands, Vitamin D and Calcitonin 19.64
- The Thymus Gland 19.70

## 20 The Reproductive System and Drugs Affecting the Reproductive System

- Male Genital Organs 20.2
- Female Genital Organs 20.9
- Gonadotrophic Hormones and their Preparations 20.19
- The Menstrual Cycle 20.20
- Oestrus and Sexual Behaviour 20.22
- Conception 20.23
- Contraception 20.28
- Gestation 20.36

### Chapter 20 continued

- Teratology 20.43
- Labour (Parturition: Birth) 20.53
- Perinatal Pharmacology 20.56
- Lactation 20.60

## 21 The Blood: Drugs Affecting Coagulation, Fibrinolysis, Haematopoiesis and the Functioning of Blood Cells

- Blood Coagulation 21.4
- Anticoagulant Drugs 21.9
- Fibrinolytic System 21.16
- Platelets (Thrombocytes) 21.21
- Haemostasis 21.22
- Erythrocytes 21.24
- Haemoglobin 21.31
- Vitamin-Deficiency Anaemias 21.36
- Aplastic Anaemia 21.40
- Haemoglobinopathies 21.40
- Erythrocyte Metabolism 21.43
- Blood Groups 21.48
- Haemolysis and Haemolytic Anaemias 21.50
- Leucocytes 21.52

## 22 The Heart and Drugs Affecting Cardiac Function

- Anatomy of the Heart 22.1
- Blood Supply to the Walls of the Heart 22.3
- Cardiac Muscle 22.10
- Pacemaker and Conducting Tissue 22.19
- Mechanical Events and Pressure and Volume Changes During the Cardiac Cycle 22.22
- Heart Sounds 22.24
- Cardiac Output 22.24
- Cardiac Metabolism 22.27
- The Electrocardiogram 22.27
- Innervation of the Heart 22.33
- Factors Controlling Cardiac Output 22.39
- The Work of the Heart 22.41
- Effects of Inorganic Cations on the Heart 22.43
- Cardiac Diseases 22.44
- Dysrhythmias 22.44
- Antidysrhythmic Drugs 22.52
- Ischaemic Heart Disease (IHD) 22.63
- Angina Pectoris 22.64
- Cardiogenic Shock 22.69
- Cardiac Failure 22.72
- Cardiac Glycosides 22.74

- 23 The Cardiovascular System and Drugs Affecting the Circulation**  
 Blood Vessels 23.1  
 Blood Pressure 23.4  
 Measurement of Blood Flow 23.12  
 Nervous Control of Blood Pressure 23.13  
 Humoral Factors Acting on the Circulation 23.20  
 Role of Circulating Fluid Volume in Control of Blood Pressure 23.22  
 Circumstances Affecting the Cardiovascular System 23.22  
 Special Regions of the Circulation 23.23  
 Hypertension 23.26  
 Essential Hypertension 23.30  
 Antihypertensive Therapy 23.36  
 Hypotensive States, Circulatory Collapse and Shock 23.58  
 Disorders of Arteries 23.60  
 Drugs Used to Treat Peripheral Vasospastic Disorders 23.64  
 Disorders of Veins 23.68
- 24 The Respiratory System and Drugs Affecting Respiratory Function**  
 Respiratory Volumes and Capacities 24.3  
 Lung Surfactant 24.4  
 Regulation of Breathing 24.7  
 Coughing and Sneezing 24.10  
 Exchange and Transport of Gases 24.13  
 Pharmacological Actions of Respiratory Gases 24.21  
 Respiratory Stimulant Drugs 24.22  
 Bronchial Asthma 24.24  
 Drugs used in the Treatment of Asthma 24.26  
 Chronic Bronchitis and Emphysema 24.32  
 Hay Fever 24.33  
 Influenza and the Common Cold 24.33
- 25 The Alimentary Canal and Drugs Used in the Treatment of its Disorders**  
 Mouth and Oesophagus 25.1  
 Stomach 25.4  
 Vomiting and Anti-emetic Drugs 25.6  
 Gastric Secretions 25.10  
 Peptic Ulcer 25.16  
 The Duodenum, Pancreas and Bile Duct 25.20  
 The Small Intestine 25.23  
 The Large Intestine 25.29  
 Constipation and Purgatives 25.32  
 Diarrhoea and Antidiarrhoeal Drugs 25.36
- 26 The Liver: Hepatic Function and Drugs Affecting the Liver**  
 Structure of the Liver 26.1  
 Metabolic Functions of the Liver 26.3  
 Bile 26.4  
 Hepatic Microsomal Enzyme Systems 26.14  
 Hepatic Nonmicrosomal Conjugation Reactions 26.28  
 Diseases of the Liver 26.30  
 Hepatotoxicity 26.33  
 Porphyrin Biosynthesis in the Liver and its Disorders 26.38
- 27 The Urinary System: Drugs Affecting Renal Function and the Urinary Tract**  
 The Kidneys 27.1  
 The Formation of Urine 27.3  
 Uricosuric Drugs 27.11  
 Measurement of Kidney Function 27.12  
 Endocrine Functions of the Kidneys 27.15  
 Kidney Diseases 27.16  
 Renal Excretion of Drugs 27.18  
 Drug-Induced Kidney Damage 27.18  
 The Urinary Tracts 27.20  
 Micturition 27.21  
 Therapy of Urinary Tract Infections 27.22  
 Renal Contrast Media 27.24  
 Diuretic Drugs 27.25  
 Diuretics Acting Directly on the Renal Tubules 27.27  
 Drugs that Inhibit Sodium Reabsorption by an Indirect Mechanism 27.36  
 Drugs that Increase the Filtered Load of Sodium Chloride 27.37  
 Synopsis of Diuretic Actions 27.38  
 Potassium Supplements 27.38  
 Animal Tests for Diuretic Action 27.38  
 Antidiuretics 27.39
- 28 Regulation of Body Fluid Composition, and Plasma Lipids**  
 Distribution of Body Water and Electrolytes 28.1  
 Water and Sodium Balance 28.6  
 Interstitial Fluid and Lymph 28.11  
 Acid-Base Balance and Hydrogen Ion Regulation 28.16  
 Potassium, Magnesium and Calcium 28.26  
 General Remarks on Water, Electrolyte, Acid-Base and Osmotic Imbalance 28.31  
 Plasma Lipids and Hyperlipidaemia 28.31

**29 The Eye and Drugs Affecting Ocular Function**

- Superficial Structures of the Eye 29.2
- Drugs used for the Treatment of Topical Infections of the Eye 29.6
- The Uvea and its Structures 29.7
- Glaucoma and Antiglaucoma Drugs 29.10
- Miotic and Mydriatic Drugs 29.12
- The Lens 29.17
- The Retina 29.22
- The Extraocular Muscles 29.30

**30 The Special Chemical Senses**

- Smell 30.1
- Taste 30.10

**31 Body Temperature**

- Heat Production by Metabolism 31.1
- Mechanisms of Heat Loss 31.4
- Thermoreceptors 31.7
- Control of Body Temperature 31.7
- Departures from Thermonormality 31.11
- Climatic Temperature 31.15

**32 The Skin and Drugs Affecting the Skin**

- Structure of the Skin 32.1
- Epidermis 32.1
- Sweat Glands 32.4
- Sebaceous Glands 32.6
- Hair 32.8
- Sensory Innervation of the Skin 32.10
- Skin Colour 32.12
- Ultraviolet Radiation 32.16
- Allergic and Inflammatory Reactions of the Skin 32.18
- Bullous (Blistering) Disorders 32.21
- Superficial Infections and Infestations of the Skin 32.23
- General Dermatological Agents 32.26

**33 Chemotherapy of Viral Diseases**

- Physical and Chemical Properties of Viruses 33.5
- Infectivity and Replication of Viruses 33.8
- Adsorption and Replication of Bacteriophages 33.10
- Viruses Pathogenic to Man 33.10
- Some Diseases of Obscure Viral Aetiology 33.16
- Resistance to and Recovery from Viral Infections 33.17
- Immunization 33.20
- Drug Treatment of Viral Infections 33.20
- Oncogenic Viruses 33.24

**34 Chemotherapy of Bacterial and Related Infections**

- Bacteria, Spirochaetes, Rickettsiae and Related Organisms 34.2
- Bacteria 34.2

*Chapter 34 continued*

- Bacterial Pathogenicity 34.12
- Spirochaetes 34.13
- Mycoplasmas 34.13
- Rickettsiae and Related Organisms 34.13
- Antiseptics and Disinfectants 34.14
- Chemotherapy of Bacterial Infections 34.15
- Antimetabolites 34.19
- Inhibitors of Cell Wall Synthesis 34.26
- Drugs that Modify Plasma Membrane Permeability 34.37
- Inhibitors of Nucleic Acid and Protein Synthesis 34.38
- Metronidazole 34.47
- The Chemotherapy of Tuberculosis 34.47
- Drug Resistance 34.49
- Antibacterial Agents in Animal Husbandry 34.52

**35 Chemotherapy of Fungal Infections**

- Dermatomycoses 35.3
- Candidiasis 35.6
- Aspergillosis 35.9
- Deep Mycoses 35.9
- Farmer's Lung and Similar Conditions 35.11
- Antifungal Drugs 35.11

**36 Chemotherapy of Protozoal Infections**

- Sporozoa 36.1
- Malaria 36.1
- Antimalarial Drugs 36.5
- Toxoplasmosis 36.12
- Mastigophora 36.15
- Trichomoniasis 36.15
- Giardiasis 36.16
- Typanosomiasis 36.17
- Leishmaniasis 36.21
- Sarcodina 36.22
- Amoebiasis 36.22
- Ciliophora 36.26
- Balantidial Dysentery 36.26

**37 Chemotherapy of Infections by Multicellular Organisms**

- Helminth Infections 37.1
- Anthelmintic Drugs 37.14
- Obligate Parasitic Arthropods 37.26
- Lice 37.26
- The Scabies Mite 37.28

**38 Neoplastic Disease and Anticancer Drugs**

- Neoplastic Disease 38.1
- Oncogenesis 38.3
- Tests for Oncogenicity 38.12
- Therapy of Neoplastic Diseases 38.15
- Drug Therapy of Cancer 38.15
- Immunological Diagnostic Tests for Cancer 38.23
- Laetrile 38.23

## 39 Principles of Drug Action

- Drug Action in Relation to the Level of Biological Organization 39.1
- Drug Actions Dependent on Non-specific Physicochemical Mechanisms 39.3
- Chemical Bonds Involved in Drug Action 39.4
- Chelating Agents 39.8
- Enzymes as Primary Targets for Drug Action 39.12
- Transport Systems as Primary Targets for Drug Action 39.13
- Receptors as Primary Targets for Drug Action 39.13
- Kinetic Analysis of Drug-receptor Interactions 39.16
- Deduction of the Nature of Receptor Sites from Structure-activity Relationships 39.43
- Coupling of Agonist-receptor Interactions to Responses 39.50
- Identification and Isolation of Receptors 39.53
- Cholinoceptors 39.55
- Adrenoreceptors 39.65
- Receptors of Central Neurones 39.67
- Receptors for Endocrine Hormones 39.68

## 40 Absorption, Distribution, Excretion and Metabolism of Drugs: Biopharmaceutics and Pharmacokinetics

- General Properties of Drugs Influencing their Pharmacokinetic Handling 40.1
- Administration and Absorption of Drugs 40.7
- Distribution of Drugs in the Body 40.18
- Drug-Delivery Systems 40.30
- Drug Excretion 40.30
- Drug Metabolism 40.35
- Pharmacokinetics 40.45

## 41 Quantitative Evaluation and Statistical Analysis of Drug Action

- Variability in Responses to Drugs 41.1
- The Design of Experiments 41.2
- Biological Assay 41.5
- Statistical Analysis of a Single Sample 41.6
- Binomial Distribution 41.11
- Gaussian Distribution 41.16
- Student Distribution 41.22
- Distribution of  $\chi^2$  41.26
- Distribution of F or Variance Ratio 41.29
- Nonparametric Statistical Tests 41.31
- Statistical Analysis of the Relationship between Dose and Response 41.37

## 42 Social Pharmacology: Drug Use for Nonmedical Purposes: Drug Dependence

- Ethanol 42.2
- Tobacco 42.25
- Caffeine 42.40
- Cannabis 42.43
- Sedative-Hypnotic Drugs 42.61
- Anaesthetics and Volatile Solvents 42.64
- Opium, Morphine, Diamorphine and Related Drugs 42.66
- Coca and Cocaine 42.79
- Amphetamines and Related Drugs 42.82
- Psychedelic Drugs 42.85
- Miscellaneous Ethnopharmacological Agents 42.40
- Some Terms Used in Connection with Drug Dependence and Their Definition 42.94
- A General Account of Social Pharmacology and Drug Dependence 42.99

## 43 The Diet and Diet-Induced Diseases. Appetite Control. Pharmacologically Active Constituents of Food

- Energy 43.2
- Protein 43.2
- Carbohydrate and Fat 43.4
- Vitamins 43.5
- Substances with Vitamin-Like Actions (Vitaminoids) 43.18
- Mineral Salts 43.19
- Dietary Fibre 43.24
- Vegetarian Diets 43.26
- Nutrition in Pregnancy 43.27
- Neonatal Nutrition 43.27
- Therapeutic Diets in Particular Disease States 43.28
- Energy-Protein Malnutrition 43.30
- The Influence of Nutrition on Drug Metabolism 43.33
- Parenteral Nutrition 43.34
- Hunger and Thirst: The Control of Appetite 43.35
- Anorectic (Appetite-Suppressant) Drugs 43.36
- Other Drugs used to Reduce Body Weight 43.42
- Anorexia 43.42
- Appetite Stimulants 43.43
- Some Diseases Induced by Naturally-Occurring Dietary Components 43.44

## Further Reading F.R.1

## Index I.1
