Chapter 1

HISTORY OF CHOLERA 1

Dhiman Barua

1. Introduction	1
2. Cholera before 1817	2
3. The Six Pandemics (1817–1923)	7
3.1. First Pandemic (1817–1823)	8
3.2. Second Pandemic (1829–1851)	8
3.3. Third Pandemic (1852–1859)	11
3.4. Fourth Pandemic (1863–1879)	12
3.5. Fifth Pandemic (1881–1896)	14
3.6. Sixth Pandemic (1899–1923)	14
4. Cholera during 1926–1960	15
5. The Seventh Pandemic (1961–?)	16
6. Indigenous Cholera in the United States and Australia	23
7. Conclusions	23
References	35

Chapter 2

BACTERIOLOGY OF *VIBRIO* AND RELATED ORGANISMS 37

Riichi Sakazaki

1. The Genus <i>Vibrio</i>	37
1.1. Definition	38
1.2. Physiology and Biochemistry	38
1.3. Resistance and Antibiotic Susceptibility	43
1.4. Serology	43
1.5. Phage- and Bacteriocin-Typing of <i>V. cholerae</i>	46
1.6. Isolation and Identification	46
2. The Genus <i>Aeromonas</i>	51
3. The Genus <i>Plesiomonas</i>	53
References	54

Chapter 3

EPIDEMIOLOGY AND PATHOGENICITY OF NON-01 VIBRIO SPECIES AND RELATED ORGANISMS

57

S. C. Sanyal

1. Introduction	57
2. Epidemiology	57
2.1. Natural Occurrence and Their Habitat	57
2.2. Geographic Distribution of <i>V. cholerae</i> Non-01 Diseases	58
2.3. Seasonal Pattern	59
2.4. Modes of Transmission and Incubation Period	59
3. Pathogenicity	61
3.1. Diseases Caused by <i>V. cholerae</i> Non-01	61
3.2. Virulence Factors and Probable Mechanisms of Causing Disease	62
References	65

Chapter 4

GENETICS

69

James B. Kaper and Mary M. Baldini

1. Introduction	69
2. Gene Transfer	69
2.1. Conjugation	69
2.2. Transduction	71
2.3. Transformation	73
2.4. Mobile Genetic Elements	73
3. Genetics of Cholera Toxin	74
3.1. Relationship between <i>elt</i> and <i>ctx</i>	74
3.2. Structure of <i>ctxAB</i>	74
3.3. Transcriptional and Translational Control	75
3.4. Regulation	75
3.5. Gene Duplication	78
4. Genetics of Factors Other Than Cholera Toxin	79
4.1. Hemolysin	79
4.2. O-Antigen	80
4.3. Adherence	81
4.4. Outer Membrane Proteins	82
4.5. Neuraminidase	82
4.6. Other Toxins	82
4.7. DNA Degradation, Recombination, and Repair	83
4.8. Motility	83
4.9. Metabolic Pathways	84
4.10. Iron-Regulated Genes	84
4.11. Antigens Expressed <i>in Vivo</i>	85
5. Applications	86
5.1. Vaccine Development	86
5.2. Molecular Epidemiology	87
6. Conclusions	88
References	89

<i>Chapter 5</i>	
VIBRIO PHAGES AND PHAGE-TYPING	95
<i>B. Rowe and J. A. Frost</i>	
1. Introduction	95
2. <i>V. cholerae</i> 01	95
2.1. Phage-Typing Schemes	95
2.2. Limitations of the Above Schemes and Requirements for Future Development	100
2.3. Lysogeny and Prophage-Typing	100
3. Phage-Typing of <i>V. cholerae</i> Non-01	101
References	104
 <i>Chapter 6</i>	
THE ECOLOGY OF <i>VIBRIO CHOLERAE</i>	107
<i>Rita R. Colwell and William M. Spira</i>	
1. Introduction	107
2. Historical Perspective on Survival	109
2.1. Survival in Nonaquatic Environments	109
2.2. Survival in Aquatic Environments	110
3. Dormancy as a Response to Nutrient Deprivation	111
4. Physiology of <i>V. cholerae</i> in the Aquatic Environment	115
4.1. Temperature and Salinity Relationships	115
4.2. Adherence to Surfaces	118
4.3. Colonization of Macrobionta with Chitinaceous Exoskeletons	120
5. <i>V. cholerae</i> and Its Implications for Cholera Epidemiology	122
References	123
 <i>Chapter 7</i>	
THE EPIDEMIOLOGY OF CHOLERA	129
<i>Roger I. Glass and Robert E. Black</i>	
1. Introduction	129
1.1. Epidemiologic Lessons from the Early Pandemics and Epidemics	129
1.2. New Concepts in the Epidemiology of Cholera	130
2. Cholera in the Seventh Pandemic	131
3. Epidemiologic and Laboratory Tools in the Study of Cholera	134
3.1. Laboratory Markers of <i>V. cholerae</i> 01 Strains	134
3.2. Serologic Tools for the Study of Cholera	135
3.3. Epidemiologic Methods for the Study of Cholera	136
4. Epidemiologic Patterns of Cholera	137
4.1. Endemic Cholera	138
4.2. Epidemic Cholera	139
5. Patterns of Transmission	140
5.1. Fecal-Oral Route	140
5.2. Infectious Dose and Gastric Acidity	140
5.3. Incubation Period	141
5.4. Waterborne Transmission	142

5.5. Foodborne Transmission	144
5.6. Person-to-Person Transmission	146
5.7. Fomites	147
5.8. Flies	147
6. Risk Factors Associated with Cholera Transmission	148
6.1. Blood Group	148
6.2. Breast Feeding	148
6.3. Nutritional Status	149
6.4. Gastric Acidity	149
6.5. Risks to Family Contacts	149
6.6. Traveler's Diarrhea	150
References	150

Chapter 8

CHOLERA ENTEROTOXIN (CHOLERAGEN): A HISTORICAL PERSPECTIVE	155
---	-----

Richard A. Finkelstein

1. Koch's Postulates	155
2. Koch's Fifth Postulate	156
3. The "Dry Years"	156
4. The "Discoveries" of Cholera Enterotoxin	157
5. The "Recognition" of Cholera Enterotoxin	158
6. Isolation and Purification of Cholera Enterotoxin	162
7. Properties of the Cholera Enterotoxins	163
8. Mode of Action of Cholera Enterotoxin and the Cholera Toxin-Related Enterotoxins	166
8.1. Binding of Cholera Toxin	166
8.2. Cholera Toxin: An ADP-Ribosyltransferase	169
9. The Cholera Toxin-Related Enterotoxins	172
10. Immunological Aspects	175
11. Epilogue	179
References	180

Chapter 9

COLONIZATION AND PATHOLOGY	189
----------------------------------	-----

R. Bradley Sack

1. Introduction	189
2. Vibrio Ingestion	190
3. Colonization of the Small Bowel	190
3.1. Chemotaxis and Motility	191
3.2. Hemagglutinins	192
3.3. Outer Membrane Proteins and Lipopolysaccharides	192
3.4. Fimbria	192
4. Pathology	193
5. Animal Models for the Study of Pathogenesis	195
References	195

Chapter 10

PATHOGENESIS	199
--------------------	-----

Jan Holmgren

1. Synthesis, Assembly, and Secretion of Cholera Toxin	200
1.1. Subunit Structure and Function	200
1.2. Genetics	201
1.3. Toxin Assembly and Secretion	201
2. Toxin Binding and Activation of Adenylate Cyclase in Epithelial Cells	202
2.1. Receptors	202
2.2. Effects on Adenylate Cyclase	203
3. Effects on Fluid Transport Mechanisms	203
3.1. Physiology	203
3.2. Pathophysiology	204
3.3. Other Secretory Mechanisms?	204
4. Additional Toxins?	206
References	206

Chapter 11

PATHOPHYSIOLOGY AND CLINICAL ASPECTS OF CHOLERA	209
---	-----

G. H. Rabbani and William B. Greenough III

1. Introduction	209
2. Pathogenesis of Cholera	210
2.1. Gastric Acid	210
2.2. Intestinal Colonization by <i>V. cholerae</i>	210
2.3. Bacterial Pili and Mucus Coat	211
2.4. Cell Membrane Interaction and Bacterial Binding	211
2.5. Enterotoxin Production and the Clinical Disease	212
2.6. Role of Prostaglandins in Cholera	212
2.7. Toxin-Induced Intestinal Secretion of Salt and Water	213
2.8. Colonic Potassium Secretion and Reduced Water Absorption	213
3. Clinical Manifestations of Cholera	216
3.1. The Mild Disease	216
3.2. The Typical Disease	216
3.3. Pathogenesis and Clinical Manifestations of Dehydration	217
4. Complications of Cholera	218
4.1. Metabolic Acidosis	218
4.2. Renal Failure	219
4.3. Hypoglycemia	219
4.4. Cardiac Abnormalities	220
4.5. Paralytic Ileus	220
4.6. Seizures	221
4.7. Cholera in Pregnancy	221
4.8. Pulmonary Edema	221
4.9. Changes in Biochemical Parameters in Blood	221
5. Cholera in Children	222
5.1. Characteristics of Diarrheal Stool in Children	223
6. Nutrition in Cholera	224
References	225

Chapter 12

LABORATORY DIAGNOSIS 229

Sudhir Chandra Pal

1. Introduction	229
2. Collection of Specimens	229
2.1. Stool	230
2.2. Rectal Swab	230
2.3. Labeling	230
3. Transportation of the Specimens	230
3.1. Venkatraman-Ramakrishnan Medium	230
3.2. Cary-Blair Medium	231
3.3. Alkaline Peptone Water	231
3.4. Monsur's Transport Medium	231
3.5. Blotting Paper Strip	232
3.6. International Postal Regulations	232
4. Isolation/Detection of <i>V. cholerae</i> from Stool	232
4.1. Rapid Laboratory Diagnosis	232
4.2. Cultural Methods	233
5. Identification and Characterization of <i>V. cholerae</i> 01	236
5.1. Species Identification	236
5.2. Biotyping of <i>V. cholerae</i> 01	238
6. Serological Tests for Retrospective Diagnosis of Cholera	240
6.1. Agglutination Test	240
6.2. Vibriocidal Test	241
6.3. Indirect Bacterial Hemagglutination Test	242
6.4. Enzyme-Linked Immunosorbent Assay Tests	242
6.5. Toxin Neutralization Test	243
7. Laboratory Diagnosis of Cholera Carriers	244
7.1. Collection of Samples	244
7.2. Isolation of <i>V. cholerae</i> 01	245
7.3. Serological Diagnosis	245
8. Isolation of <i>V. cholerae</i> 01 from Environmental Samples and Food	246
8.1. Water	246
8.2. Sewage	246
8.3. Food Stuffs	247
8.4. Flies	247
References	247

Chapter 13

CLINICAL MANAGEMENT OF CHOLERA 253

Dilip Mahalanabis, A. M. Molla, and David A. Sack

1. Introduction	253
2. Development of Cholera Treatment	256
2.1. Glucose-Facilitated Absorption of Salts and Water	256
2.2. Composition of Oral Rehydration Solutions	258
3. Use of Intravenous Fluids	265

4. Antibiotics	267
4.1. Antibiotic Therapy of Patients	267
4.2. Prophylactic Antibiotics	267
4.3. <i>V. cholerae</i> Resistant to Multiple Antibiotics	268
5. Antidiarrheal and Antisecretory Agents	268
6. Feeding during Cholera	269
7. Clinical Management	270
7.1. Diagnosis and Assessment of Patients at a Treatment Center	270
7.2. Rehydration	271
7.3. Maintenance Therapy	272
7.4. Diet	274
8. Complications of Cholera	274
9. Cholera in Remote Areas	277
9.1. Rural or Community Diarrhea Treatment Centers	277
9.2. Recognition of an Epidemic	278
9.3. Management of a Cholera Outbreak	278
References	281

Chapter 14

IMMUNITY AND VACCINE DEVELOPMENT

Myron M. Levine and Nathaniel F. Pierce

1. Introduction	285
2. Historical Aspects	286
3. Demonstration of Infection-Derived Immunity	287
4. Antitoxic versus Antibacterial Immunity	288
4.1. Protective Mechanisms against Cholera: Inferences from Volunteer Studies and Field Trials	289
4.2. The Protective Antigens of <i>V. cholerae</i>	290
5. The Intestinal Secretory Immune System and Immunization against Cholera ...	293
6. Vaccines Developed or Tested Since 1960	297
6.1. Parenteral Vaccines	297
6.2. Oral Vaccines	301
7. Summary	319
References	320

Chapter 15

PREVENTION AND CONTROL OF CHOLERA

Dhiman Barua and Michael H. Merson

1. Introduction	329
2. Strategies Applied in Diarrheal Disease Control (CDD) Programs and Their Relevance for Cholera Control	331
3. Preparedness for Cholera Control	332
3.1. National Epidemic Control Committee	332
3.2. Surveillance	332
3.3. Environmental Sanitation and Water Supply	333
3.4. Communication of Health Information	333

3.5. Training in Clinical Management	333
3.6. Laboratory Services	334
3.7. Mobile Teams	334
3.8. Logistics	334
4. Control Activities during the Epidemic	335
4.1. Treatment and Investigation	335
4.2. Control and Prevention	337
5. Activities after the Epidemic	343
6. Reasons for Failure to Control Cholera Epidemics	344
7. Cholera Control in a Refugee Camp	345
8. Cholera Prevention at Fairs and Pilgrimages	346
9. Conclusions	346
References	347
EPILOGUE: THE LATIN AMERICAN CHOLERA EPIDEMIC	351
<i>Eugene J. Gangarosa and Robert V. Tauxe</i>	
Success and Failure	351
