Preface	v
Acknowledgements	vii
Abbreviations	ix
<b>1. Introduction</b>	<b>1</b>
<b>2. Diagnostic issues</b>	<b>6</b>
2.1 Clinical diagnostic criteria	6
2.2 Relevance of diagnostic criteria to epidemiological research	10
2.3 Case-ascertainment methods	12
<b>3. Epidemiology of multiple sclerosis</b>	<b>16</b>
3.1 Appropriate use of incidence and prevalence rates to study etiology	16
3.2 Prevalence and incidence of multiple sclerosis worldwide	20
3.3 Environmental risk factors	39
3.4 Genetic susceptibility	49
3.5 Other risk factors	59
3.6 Prognostic factors	64
<b>4. Temporal trends</b>	<b>67</b>
4.1 Changes in the prevalence of multiple sclerosis	67
4.2 Is the incidence of multiple sclerosis increasing?	73
4.3 Changes in the clinical picture of multiple sclerosis	78
<b>5. Conclusions and challenges for future research</b>	<b>80</b>
5.1 Diagnostic criteria	80
5.2 Low frequency	80
5.3 Factors associated with acquisition versus clinical manifestation	81

## CONTENTS

5.4 Narrowing windows of exposure	82
5.5 Retrospective versus prospective studies	83
5.6 Possible different forms of multiple sclerosis	84
5.7 Prenatal risk factors	88
5.8 Final note	88
<b>References</b>	<b>90</b>
