

## CONTENTS

	Page
Foreword .....	11
<b>CHAPTER 1. INTRODUCTION</b>	
Purpose of the publication .....	15
Previous epidemiological studies and control trials in tropical Africa .....	17
Rationale of the project .....	19
Objectives of the project .....	21
<b>CHAPTER 2. THE STUDY DESIGN AND STUDY AREA</b>	
Study design, variables measured, and methods used .....	23
Malaria control strategies .....	23
Project phases and calendar .....	28
Villages selected for follow-up and villages treated by the various strategies .....	28
Variables measured, frequency of measurement, and methods used .....	30
Recording, storage and retrieval of data .....	33
Services and staffing .....	34
Area, climate, population.....	35
Orohydrography .....	35
Climate and vegetation .....	35
Meteorology .....	37
Population .....	39
<b>CHAPTER 3. CONTROL OPERATIONS</b>	
Residual spraying .....	41
Sprayable surfaces.....	41
The spraying operations .....	42
Operational results: the coverage achieved and the dose applied .....	42
Administration of drugs .....	43
Mass distribution of sulfalene-pyrimethamine in 1972-1973 .....	43
Post-intervention drug distributions in 1974-1975 .....	48
Discussion .....	49
Summary .....	50

## CONTENTS

	Page
<b>CHAPTER 4. ENTOMOLOGY</b>	
<i>Anopheline fauna and observations regarding minor species</i> .....	53
<i>Collections as indices of density</i> .....	54
<i>Baseline findings</i> .....	56
Vector density .....	59
Sporozoite rates and inoculation rates .....	64
Vector behaviour .....	66
Age composition and longevity .....	71
Vectorial capacity .....	73
<i>Effect of intervention, in particular residual spraying with propoxur</i> .....	75
Results of the preliminary trial of propoxur .....	76
Effect of propoxur on vector density .....	77
Sporozoite rates and inoculation rates .....	84
Vector behaviour .....	85
Age composition and longevity .....	86
Vectorial capacity .....	86
<i>After-effect of propoxur, after discontinuation of spraying</i> .....	88
Vector density .....	88
Sporozoite rates and inoculation rates .....	90
Vector behaviour .....	90
Age composition and longevity .....	92
Bioassay and chemical tests .....	92
<i>Compact versus scattered settlements</i> .....	94
<i>Anopheles gambiae</i> and <i>A. arabiensis</i> .....	95
Discussion .....	99
The estimation of the vectorial capacity .....	99
Transmission in Garki and its natural variation .....	101
The effect of propoxur .....	101
<i>A. gambiae</i> , <i>A. arabiensis</i> and intraspecific cytogenetic variation .....	103
Evaluation of insecticidal impact .....	105
Summary and conclusions .....	106

	Page
<b>CHAPTER 5. PARASITOLOGY</b>	
Methods .....	109
Method of blood examination .....	109
Collection and processing of blood films .....	111
Parasitology staff .....	111
Sensitivity and reproducibility of the blood examination method .....	111
The parasitological indices used .....	114
Parasitological findings in the absence of intervention .....	115
Prevalence and density of parasites .....	115
Incidence and recovery rates (conversion and clearance rates) .....	125
Relationship between parasitological and entomological findings .....	131
Mixed infections and the relationship between <i>P. falciparum</i> and <i>P. malariae</i> .....	134
The intervention phase: parasitological effect of the 3 control strategies .....	139
Prevalence and density of parasites .....	139
Incidence and recovery rates (conversion and clearance rates) .....	148
Relationship between parasitological and entomological findings .....	151
Mixed infections .....	151
The post-intervention phase: the resurgence of malaria .....	153
Prevalence and density of parasites .....	153
Incidence and recovery rates (conversion and clearance rates) .....	157
Relationship between parasitological and entomological findings .....	157
Discussion .....	159
The parasitological effects of immunity to <i>P. falciparum</i> .....	159
The effect of the 3 intervention strategies on the epidemiology of <i>P. falciparum</i> .....	162
The effect of mass drug administration on parasitological immunity to <i>P. falciparum</i> .....	165

## CONTENTS

	Page
<i>P. malariae</i> , and its relationship to <i>P. falciparum</i> .....	167
<i>P. ovale</i> .....	170
Malaria in males and females .....	171
Summary .....	171
 CHAPTER 6. IMMUNOLOGY	
Material and methods .....	173
Serological results by age, survey and treatment .....	176
Immunoglobulin G .....	182
Immunoglobulin M .....	182
Precipitin (Ouchterlony) test— <i>P. falciparum</i> ...	183
Indirect fluorescent antibody (IFA) test— <i>P. falciparum</i> .....	183
Indirect fluorescent antibody (IFA) test— <i>P. malariae</i> or <i>P. brasiliense</i> .....	184
Passive (indirect) haemagglutination (IHA) test— <i>P. falciparum</i> .....	185
The longitudinal study of infants .....	185
Definition of 2 populations of infants .....	185
Immunoglobulin levels .....	186
Malaria antibody levels .....	186
Proportion positive by the serological tests .....	188
Serological results in the newborn in the post-intervention follow-up period .....	191
Variation by sex .....	191
Relationship between the results of the same serological test in the same person at the different surveys .....	191
Relationship between the results of different serological tests in the same person at the same survey .....	193
Relationship between parasitology and serology ...	194
Method of analysis of the baseline data .....	194
The precipitin test ( <i>P. falciparum</i> ) and <i>P. falciparum</i> parasitaemia .....	196
The IHA- <i>P. knowlesi</i> or IHA- <i>P. falciparum</i> test and <i>P. falciparum</i> parasitaemia .....	197
The IFA test and homologous parasitaemia .....	198
Immunoglobulin levels and parasitaemia .....	198

## CONTENTS

	Page
Relationship between parasitological and serological findings during and after the intervention phase .....	199
Discussion .....	199
Age and the development of the active immune response in the unprotected population .....	199
Serological changes in the protected population .....	202
Serological changes in the post-intervention phase .....	204
The longitudinal study of infants .....	204
Comparison between males and females .....	205
The correlation between different surveys in the same person .....	206
The correlation between different serological tests in the same person .....	207
The relationship between serology and parasitology in the individual .....	207
Sensitivity and specificity of the serological tests.....	210
Summary .....	211
 CHAPTER 7. ABNORMAL HAEMOGLOBINS AND ABO BLOOD GROUPS	
Material and methods .....	213
Haemoglobin electrophoresis .....	215
Haemoglobins and genetic fitness .....	216
Sickle-cell trait and malaria .....	217
Sickle-cell trait, immunoglobulins and malaria antibodies .....	218
Immunoglobulins .....	218
Ouchterlony (precipitin) test with <i>P. falciparum</i> antigen .....	220
Indirect fluorescent antibody test.....	220
Indirect haemagglutination test with <i>P. falciparum</i> antigen .....	221
Immunology by sex, tribe and haemoglobin .....	222
Immunology, malaria parasitology and haemoglobin .....	222
Findings in the Hb SS persons .....	222
Findings in the Hb SC person .....	223

## CONTENTS

	Page
Findings in the Hb AC persons .....	223
ABO blood groups and malaria .....	224
Discussion .....	224
Haemoglobin genotype frequencies, fitness, and parasitology .....	224
Serology of the Hb AA and Hb AS .....	226
The Hb SS .....	227
The Hb AC .....	227
The ABO blood groups and malaria .....	228
Summary .....	228
<b>CHAPTER 8. DEMOGRAPHY</b>	
Methods .....	231
Demographic and parasitological (DP) surveys .....	232
Local registrars (pataucis).....	232
Data-handling .....	232
Results .....	233
Distribution of the population by age and sex .....	233
Births .....	234
Deaths .....	236
Population movements.....	241
Demographic analysis of the MDA records.....	243
Discussion .....	244
Methods .....	244
Age and sex composition .....	244
Birth rate .....	245
Death rates, malaria and malaria control .....	245
Population movements.....	247
Summary .....	248
<b>CHAPTER 9. CLINICAL SURVEYS</b>	
Nutritional anthropometry .....	251
Spleen surveys .....	253
Temperature surveys .....	253
Population, study design and methods .....	253
Results .....	255
Discussion .....	257
Nutritional anthropometric surveys .....	257

## CONTENTS

	Page
Spleen rates .....	257
Temperature surveys.....	258
Summary .....	258

## CHAPTER 10. THE MATHEMATICAL MODEL OF TRANSMISSION

The assumptions of the model .....	262
Epidemiological states and transitions .....	262
Superinfection .....	265
Dynamics of the human population.....	266
Vectorial capacity and inoculation rate .....	267
Equations of the model .....	268
Fitting of the model .....	270
Data selected for fitting.....	270
Estimation of model parameters .....	272
Testing of the model .....	273
Method of evaluation .....	273
Testing of the model against observations made in Garki before and during the application of propoxur .....	274
Testing of the model against observations made in Kisumu before and after the application of fenitrothion .....	277
Determination of the endemic level by the vectorial capacity .....	281
Variants of the model .....	283
Note on the computer programmes .....	283
Discussion .....	284
The model and reality .....	284
The present model and others .....	285
The model and the planning of malaria control .....	286
The model and the teaching of the epidemiology of malaria .....	287
Summary .....	287

CHAPTER 11. PRACTICAL CONCLUSIONS FOR THE FUTURE OF MALARIA  
CONTROL

The control of malaria in the Sudan savanna of Africa.....	290
Residual insecticides .....	290

## CONTENTS

	Page
The combination of mass drug administration with residual insecticides .....	292
Selective chemotherapy and chemoprophylaxis.....	293
The use of the malaria transmission model for the planning of malaria control .....	294
References .....	297
Acknowledgements .....	307
Appendix 1. Staffing of the Project .....	308
Appendix 2. Cost of the Project .....	311
