PART I		20	The biochemical changes in striated muscle due to denervation	279	
ANATOMICAL AND PHYSIOLOGICAL FEATURES OF PERIPHERAL NERVE FIBRES AND NERVE TRUNKS		21	Changes in striated muscle due to disuse	288	
1	Peripheral nerve fibres	22	Factors influencing the onset, development and severity of the atrophy in striated muscle due to denervation	298	
2	Peripheral nerve trunks	23	The capacity of human muscles to function efficiently following reinnervation after prolonged denervation	312	
3	Anatomical features relating to the branch pattern of nerve trunks	24	Disturbances of motor mechanisms and the diagnosis of motor nerve involvement. Clinical considerations	317	
4	The mechanical properties of peripheral nerve trunks	25	Unusual disturbances of muscle function associated with nerve injury	325	
PART II		26	The pattern of motor recovery associated with the regeneration of motor nerve fibres	329	
DEGENERATION. REGENERATION. A CLASSIFICATION OF NERVE INJURY					
5	The peripheral nerve fibre in relation to injury	69			
6	Interruption of conduction with preservation of continuity of the axon	70			
7	Degeneration of the axon and associated changes	82			
8	Regeneration of the axon and associated changes	108			
9	The peripheral nerve trunk in relation to injury. A classification of nerve injury	133			
PART III		PART V			
CLINICO-PATHOLOGICAL CONSIDERATIONS		PERIPHERAL SENSORY MECHANISMS			
10	Causative agents	145	27	Peripheral sensory mechanisms. General considerations	343
11	Consequences of disruption of the endoneurium and perineurium. Neuroma formation. Fibre interaction and the artificial synapse	188	28	Disturbances of sensation occurring in the area innervated by the injured nerve	348
12	Infection and intraneural fibrosis	201	29	Testing and recording sensory function	351
13	The applied anatomy of nerve trunks in relation to nerve injury. External features	202	30	Factors complicating the evaluation of sensory function in nerve injuries	362
14	The applied anatomy of nerve trunks in relation to nerve injury. Internal features	204	31	The pattern of sensory recovery associated with the regeneration of sensory nerve fibres	366
PART IV					
BONES, JOINTS, MUSCLES AND MOTOR FUNCTION					
15	Peripheral motor mechanisms. General considerations	217	32	Factors influencing the quality of sensory recovery	370
16	Changes in bones, joints and periarticular structures due to denervation	219	33	The significance of residual sensory defects	374
17	Morphological changes in striated muscle due to denervation. Atrophy	229	34	The painful sequelae of injuries to peripheral nerves	377
18	Morphological changes in striated muscle due to denervation. Degeneration. Fibrosis. Contracture	246	35	Disturbances of sensation associated with amputation stumps. General considerations	421
19	Pathophysiology of denervated striated muscle	251	36	Stump pain and abnormal sensory phenomena superimposed on the phantom state	433
		PART VI			
		PERIPHERAL SYMPATHETIC MECHANISMS			
		38	Sympathetic denervation and recovery	461	
		39	Testing sympathetic function	466	
		40	Changes in the denervated skin and subcutaneous tissues. Trophic changes	472	

PART VII		58	Ulnar nerve lesions associated with bone and joint injuries about the elbow. Tardy ulnar palsy	780	
DIAGNOSIS AND TREATMENT					
41	Diagnosis. General considerations	483	59	The musculocutaneous nerve	796
42	Treatment. General considerations	491	60	The radial nerve. Anatomical and physiological features	802
43	Non-surgical treatment	493	61	Radial nerve lesions	820
44	Neurography. Neurolysis. Transposition	499	62	The axillary nerve	843
45	Nerve repair. General considerations	505	63	Combined nerve lesions	849
46	Suture materials and sutureless nerve union	533	64	The brachial plexus. Normal anatomy	854
47	The restoration of nerve trunk continuity by end-to-end suture	551	65	Brachial plexus lesions due to compression, stretch and penetrating injuries	870
48	Factors influencing the course of regeneration and the quality of the recovery after nerve suture	569	66	Disturbances of brachial plexus origin associated with unusual anatomical arrangements in the cervico-brachial region. The thoracic outlet syndrome	901
49	Funicular nerve repair	593	67	Brachial plexus lesions due to abnormal ribs. The 'cervical rib' syndrome	920
50	Nerve grafting	603	68	The sciatic nerve and its tibial and common peroneal divisions. Anatomical and physiological features	925
51	Miscellaneous methods of bridging gaps in nerves	637	69	Sciatic, tibial and common peroneal nerve lesions	967
PART VIII			70	Obturator nerve	992
INDIVIDUAL NERVES			71	Femoral nerve	999
52	Individual peripheral nerves. General considerations	653	72	Lateral femoral cutaneous nerve. Meralgia paraesthetica	1007
53	The median nerve. Anatomical and physiological features	656	73	Miscellaneous peripheral nerves	1011
54	Median nerve lesions	691	74	The spinal nerves	1021
55	The carpal tunnel syndrome	711		Index	1033
56	The ulnar nerve. Anatomical and physiological features	728			
57	Ulnar nerve lesions	750
