ENVIRONMENTAL HEALTH CRITERIA FOR MAN-MADE MINERAL FIBRES

1. SUMMARY	11
1.1 Identity, terminology, physical and chemical properties, analytical methods	11
1.2 Sources of human and environmental exposure	11
1.3 Environmental transport, distribution, and transformation	12
1.4 Environmental concentrations and human exposure	12
1.5 Deposition, clearance, retention, durability, and translocation	13
1.6 Effects on experimental animals and <i>in vitro</i> test systems	14
1.7 Effects on man	16
1.8 Evaluation of human health risks	18
1.8.1 Occupationally exposed populations	18
1.8.2 General population	19
2. IDENTITY, PHYSICAL AND CHEMICAL PROPERTIES, ANALYTICAL METHODS	20
2.1 Identity, terminology, physical and chemical properties	20
2.2 Production methods	22
2.2.1 General	22
2.2.2 Historical	28
2.3 Analytical methods	28
2.3.1 Air	28
2.3.2 Biological materials	31
3. SOURCES OF HUMAN AND ENVIRONMENTAL EXPOSURE	33
3.1 Production	33
3.2 Uses	34
3.3 Emissions into the environment	35
4. ENVIRONMENTAL TRANSPORT, DISTRIBUTION, AND TRANSFORMATION	36
5. ENVIRONMENTAL CONCENTRATIONS AND HUMAN EXPOSURE	37

	<u>Page</u>
5.1 Environmental concentrations	37
5.1.1 Air	37
5.1.1.1 Occupational environment	37
5.1.1.2 Ambient air	46
5.1.1.3 Indoor air	47
5.1.2 Water supplies	49
5.2 Historical exposure levels	49
5.3 Exposure to other substances	50
6. DEPOSITION, CLEARANCE, RETENTION, DURABILITY, AND TRANSLOCATION	52
6.1 Studies on experimental animals	52
6.2 Solubility studies	61
7. EFFECTS ON EXPERIMENTAL ANIMALS AND <i>IN VITRO</i> TEST SYSTEMS	65
7.1 Experimental animals	67
7.1.1 Inhalation	67
7.1.1.1 Fibrosis	77
7.1.1.2 Carcinogenicity	78
7.1.2 Intratracheal injection	80
7.1.3 Intrapleural, intrathoracic, and intra- peritoneal administration	86
7.2 <i>In vitro</i> studies	97
7.3 Mechanisms of toxicity - mode of action	106
8. EFFECTS ON MAN	108
8.1 Occupationally exposed populations	108
8.1.1 Non-malignant dermal and ocular effects	108
8.1.2 Non-malignant respiratory disease	109
8.1.2.1 Cross-sectional studies	109
8.1.2.2 Historical prospective studies	118
8.1.3 Carcinogenicity	126
8.1.3.1 Glass wool	126
8.1.3.2 Rock wool and slag wool	129
8.1.3.3 Glass filament	131
8.1.3.4 Mixed exposures	131
8.1.3.5 Refractory fibres	131
8.2 General population	131
9. EVALUATION OF HUMAN HEALTH RISKS	134
9.1 Occupationally exposed populations	134
9.2 General population	136

	<u>Page</u>
10. RECOMMENDATIONS	138
10.1 Further research needs	138
10.1.1 Analytical methods	138
10.1.2 Environmental exposure levels	138
10.1.3 Studies on animals	138
10.1.4 Studies on man	139
10.2 Other recommendations	140
10.2.1 Classification of MMMF products	140
