ENVIRONMENTAL HEALTH CRITERIA FOR d-PHENOTHRIN

INTRODUCTION	9
1. SUMMARY, EVALUATION, CONCLUSIONS, AND RECOMMENDATIONS	11
1.1 Summary and evaluation	11
1.1.1 Identity, physical and chemical properties, analytical methods	11
1.1.2 Production and use	11
1.1.3 Human exposure	11
1.1.4 Environmental fate	12
1.1.5 Kinetics and metabolism	12
1.1.6 Effects on organisms in the environment	12
1.1.7 Effects on experimental animals and <i>in vitro</i> test systems	13
1.1.8 Effects on human beings	13
1.2 Conclusions	13
1.2.1 General population	13
1.2.2 Occupational exposure	14
1.2.3 Environment	14
1.3 Recommendations	14
2. IDENTITY, PHYSICAL AND CHEMICAL PROPERTIES, ANALYTICAL METHODS	15
2.1 Identity	15
2.2 Physical and chemical properties	17
2.3 Analytical methods	17
3. SOURCES AND LEVELS OF HUMAN AND ENVIRONMENTAL EXPOSURE	21
3.1 Industrial production	21
3.2 Use patterns	21
3.3 Residues in food	21
3.4 Residues in the environment	22
4. ENVIRONMENTAL TRANSPORT, DISTRIBUTION, AND TRANSFORMATION	23
4.1 Transport and distribution between media	23
4.2 Photodegradation	23
4.3 Degradation in plants and soils	25
4.4 Degradation on stored foods	26

5. KINETICS AND METABOLISM	27
5.1 Metabolism in mammals	27
5.2 Enzymatic systems for biotransformation	31
6. EFFECTS ON ORGANISMS IN THE ENVIRONMENT	33
6.1 Aquatic organisms	33
6.2 Terrestrial organisms	33
7. EFFECTS ON EXPERIMENTAL ANIMALS AND <i>IN VITRO</i> TEST SYSTEMS	35
7.1 Single and short-term exposures	35
7.2 Long-term exposures and carcinogenicity	36
7.2.1 Rat	37
7.2.2 Mouse	38
7.2.3 Dog	39
7.3 Mutagenicity	40
7.4 Reproduction, embryotoxicity, and teratogenicity	41
7.4.1 Embryotoxicity and teratogenicity	41
7.4.2 Reproduction studies	41
7.5 Neurotoxicity	42
7.6 Miscellaneous effects	42
7.7 Mechanism of toxicity - mode of action	43
8. EFFECTS ON HUMANS	44
8.1 Clinical studies	44
9. PREVIOUS EVALUATIONS BY INTERNATIONAL BODIES	45
