

Contents

1 Introduction, 1

An anatomic classification of the mediastinum, 2

2 Preparation of body sections for the study of mediastinal anatomy, 5

3 General radiologic considerations, 8

Radiologic examination of the mediastinum, 8

The plain film examination, 8

The esophagram, 9

Fluoroscopy, 9

Tomography, 11

Angled tomography, 11

Xerotomography, 11

Computed tomography, 11

Special procedures, 26

Factors affecting the demonstration of mediastinal anatomy and pathology, 29

The lung-mediastinal interface, 29

Mediastinal fat, 29

Mach effect, 33

Radiologic characteristics of mediastinal masses, 36

Lymph nodes of the mediastinum, 39

Anatomy of the lymph nodes of the mediastinum, 40

Patterns of metastatic spread to mediastinal lymph nodes, 41

Significance of mediastinal lymph node metastasis in carcinoma of the lung, 42

Connective tissue planes of the mediastinum, 43

The perivisceral fascia, 43

The prevertebral fascia, 45

Air in the mediastinum, 48

Pneumomediastinum, 48

Pneumopericardium, 49

4 The thoracic inlet, 57

General anatomic considerations, 57

Radiologic correlations with anatomy, 63

The vessels at the thoracic inlet, 63

The thoracic outlet compression syndrome, 66

Intrathoracic goiter, 67

Spread of infection through the thoracic inlet, 75

Mediastinoscopy, 78

The cervicothoracic sign, 82

5 The anterior mediastinum, 86

General anatomic considerations, 86

Pleural reflections of the anterior mediastinum, 87

The anterior junction line, 87

The anterior extrapleural line and the cardiac incisura, 97

The normal thymus, 102

Disease involving the anterior mediastinum, 105

Thymoma, 105

Mediastinal teratoma, 109

Intrathoracic goiter, 109

Dilated internal mammary arteries, 109

Anterior mediastinal hematoma, 110

Enlargement of internal mammary lymph nodes, 111

Enlargement of diaphragmatic (cardiophrenic angle) nodes, 112

Collections of fat in the anterior mediastinum, 113

Pericardial fat pad, 113

- Epicardial fat, 118
- Fat deposition in Cushing's disease and following steroid therapy, 118
- Anterior "herniation" of lung, 121

6 The supra-aortic area, 124

- General anatomic considerations, 124
- The supra-aortic pleural reflections, 131
 - The anterior junction line, 131
 - The aortic-pulmonary line, 132
 - The left subclavian artery, 132
 - The left paratracheal line, 139
 - The left paraesophageal stripe, 139
 - The posterior junction line, 139
 - The aortic bodies and paraganglioma, 139
- Persistent left superior vena cava and left vertical vein, 140
- The left superior intercostal vein, 143
- The paraspinal line, 156

7 The infra-aortic area, 158

- General anatomic considerations, 158
- The aortic-pulmonic window, 158
 - Lateral "closure" of the aortic-pulmonic window, 159
 - Medial "closure" of the aortic-pulmonic window, 173
- The left main bronchus, 174
- The preaortic area, 178
 - The preaortic line, 178
 - The left pleuroesophageal stripe, 180
 - The posterior junction line, 183
- The thoracic duct, 183
- The paraspinal area, 189
 - The paraspinal line, 190
 - Disease altering the paraspinal line, 192
 - Traumatic rupture of the thoracic aorta, 192
 - Spontaneous rupture of the esophagus, 198
 - Neurogenic tumors, 202
 - Venous abnormalities, 202
 - Extramedullary hematopoiesis, 205
 - Abnormal fatty infiltration, 205
 - Pleural effusion, 206
- The diaphragmatic crura, 207
 - Anatomic considerations, 207
 - Influence of the crura on the thoracoabdominal extension of tumor, 207
 - The median crus syndrome, 210
 - The crura and injury to the thoracic duct, 212

8 The supra-azygos area, 216

- General anatomic considerations, 216
- The azygos arch, 223
 - Congenital displacement of the azygos arch, 230
 - The azygos lobe, 230
 - Right aortic arch, 231
- The prominent azygos vein, 231
 - Aneurysmal dilatation of the azygos arch, 235
 - Azygos vein enlargement secondary to increased right ventricular pressure, 240
 - Azygos vein enlargement due to increased blood flow through it, 241
- The supra-azygos recess, 247
 - The superior vena cava, 250
 - The right paratracheal line, 254
 - Anatomic considerations, 254
 - Enlargement of right tracheobronchial lymph nodes, 257
 - The paraesophageal line, 263
 - Anatomic considerations, 263
 - Achalasia, 264
 - The posterior junction line, 266
- The paraspinal line, 270

9 The infra-azygos area, 273

- General anatomic considerations, 273
- The inferior vena cava, 275
- The azygoesophageal recess, 280
 - The right pleuroesophageal stripe, 280
 - The posterior junction line, 284
 - Disease distorting the azygoesophageal recess, 287
 - Subcarinal lymph node enlargement, 287
 - Left atrial enlargement, 297
 - Bronchogenic cyst, 298
 - Esophageal masses, paraesophageal lymph node enlargement, and other masses lying posteriorly in the mediastinum, 299
 - Posterior "herniation" of lung, 303
 - Massive right pleural effusion, 304
 - Visualization of pulmonary and pleural masses by virtue of their contact with contralateral lung across the azygoesophageal recess, 306
 - Hiatus hernia, 311
 - The prepsinal line, 312
 - The paraspinal area, 313

10 The hila, 316

- General anatomic considerations, 316
- Radiologic correlations with anatomy, 322
 - Analysis of the hila on lateral radiographs, 323
 - The inferior pulmonary ligament, 329
- The abnormal hilum, 329
- Abnormality of size, 329
 - Hilar mensuration, 329
 - Enlargement of hilar lymph nodes, 330
- The hilum overlay sign, 333
- The hilum in pulmonary venous hypertension: the hilar angle, 333
