Preface	XIX
-------------------	-----

Opening Session

Opening Address by the Chairman of the Organizing Committee of the VIIIth International Congress of Biomechanics <i>A. Morecki</i>	3
--	---

Welcome by the Scientific Secretary of the Polish Academy of Sciences <i>J. Kawzunek</i>	6
--	---

Welcome by the President of the Committee for Physical Culture and Sport <i>M. Renko</i>	9
--	---

Welcome by the President of the Polish Society for Theoretical and Applied Mechanics <i>M. Dietrich</i>	11
---	----

Welcome by the President of the Polish Society for Medical Physics <i>J. Keller</i>	13
---	----

Introductory remarks by the President of International Society of Biomechanics <i>R. C. Nelson</i>	14
--	----

Keynote address The Jürg Wartenweiler Memorial Lecture Tasks and needs of rehabilitation bioengineering <i>M. Weiss</i>	15
--	----

Characteristics of Bones and Ligaments

General lecture Biomechanics of bone <i>K. R. Piekarski</i>	23
---	----

Tensile testing of human ligaments <i>A. Hjeltnes, H. Olofsson, and S. Asplund</i>	32
--	----

Direct "in vivo" measurement of torque and bending in sheep tibiae <i>J. Cordey, M. Schuetzer, P. Regazzoni, and S. M. Perren</i>	38
---	----

Knee ligament length changes during walking <i>B. D. Wilson</i>	45
---	----

Ankle joint biomechanics <i>P. Procter, N. Berme, and J. P. Paul</i>	52
--	----

Geometrical and mechanical properties of the human femur <i>R. Huiskes and T. J. Stoff</i>	57
--	----

- A study of stress distribution in three-dimensional models of the lumbar spine
R. Bedzinski, A. A. Kozłowska, and A. Wall 65

Muscle Mechanics and Control

- General Lecture** The length-tension relation of skeletal and cardiac muscle
B. R. Jewell 75
- Control mechanism of bifunctional muscles: a reflex approach *C. Pérot and
 F. Goubel* 84
- Cortical control of slow and fast motoneurons innervating forelimb muscles of the
 cat *Y. Kawai, O. Sato, K. Endo, and H. Nju* 89
- The sensitivity of the monosynaptic reflex arc in the leg extensor muscles of the
 walking man *M. Garret, R. C. Luckwill, and J. J. A. McAleer* 95
- The effect of activity on the normal development of rat muscle fibres *H. A. Dahl
 and O. G. Aus* 100
- Effect of forced stabilization on magnitude of revealed muscular force
S. Kornecki, J. Zawadzki, and T. Bober 107
- The problem of mechanical impedance of the human skeletal muscle *S. Otáhal,
 V. Karaš, and Morávková* 114
- Investigations of functional parameters of the human spine muscles *A. Kabisch
 and W. Blaszk* 121
- Influence of countermovement amplitude in potentiation of muscular
 performance *C. Basso and P. V. Komi* 129
- Rate of force development, muscle structure and fatigue *I. T. Viitasalo and
 P. V. Komi* 136
- Analysis of force-time characteristics of muscles *L. Dworak* 142
- The force-velocity relation of a kinematic chain in man *E. Tsourouhas and
 V. Klissourous* 145

Posture

- The autogressive structure of postural sway *D. Brüner and H. Seidel* 155
- Analysis of reverse reaction phenomenon and non-linearity of human tracking
 motion in standing posture *N. Ohnishi, K. Tsuchiya, K. Ito, and M. Ito* 161
- Changes in postural stability with special reference to age *T. Yamamoto* 169
- Form and function of the spine in young males with and without "back troubles"
K. Klausen, B. Nielsen, and L. Madsen 174

Mathematical Modelling

- General lecture** Mathematical models for dynamics and control of posture and
 gait *R. B. McGhee* 183
- Comparison of cinematographic and dynamographic methods of body motion
 analysis *J. Böswart, H. Naváková, J. Sukop, K. Fidelus, J. Murawski, and
 K. Wiklik* 194

Computer simulation of an airborne backward twist somersault	<i>B. van Gheluwe</i>	200
Simulation approach to modelling and investigation of static and dynamic properties of skeletal muscles	<i>E. Biečanowska and K. Kędzior</i>	208
Cooperation of muscles under dynamic conditions	<i>A. Dąbrowska and K. Kędzior</i>	215
Establishing a computerized biomechanical atlas of infant motor patterns	<i>G. F. Garret and R. E. Garret</i>	223
A device for the estimation of forces in a flexible shark model at high Reynolds number	<i>B. E. Ungerechts</i>	230
A critical evaluation of some current experimental models simulating the human knee joint	<i>E. Prati and A. Freddi</i>	236
A neuronal model of the spinal locomotor generator	<i>W. Zmysłowski</i>	243
Computer simulation model for studying single motor unit action potentials of large motor units	<i>K. L. Boon and P. A. M. Griep</i>	249
Dilutography-modelling of physiological systems by indicator-dilution methods	<i>J. K. Pastuszek</i>	255
A validation of the joint reaction force and resultant moment output of an "n" link plane motion model of the human	<i>J. C. Pezack and R. W. Norman</i>	260
Mathematical model of the initial phase of arrow flight	<i>R. Pękalski</i>	267

Electrostimulation

Comparative evaluation of the effects of stimulation on injured spinal cord activity	<i>J. Kiwerski, R. Pańniczek, and M. Weiss</i>	275
A programmable, microprocessor-based functional electrical stimulation unit	<i>D. E. Orin, B. W. Schober, D. L. Francheski, and A. Cohen</i>	282
New aspects of the determination of functional electrical stimulation for lower extremities	<i>J. R. Aćimović, N. Gros, T. Bajd, and A. Turnkoczy</i>	288
Electrical stimulation as a training method in geriatrics	<i>J. Wiński, W. Górski, and A. Dąbrowska</i>	294
Restoration of the grasp movement of a tetraplegic with the help of Functional Electric Stimulation	<i>R. Girbardi</i>	301
Fibre recruitment pattern in the quadriceps muscle group during percutaneous electrical stimulation of the femoral nerve in man	<i>J. Halkjaer-Kelstensen and T. Ingemann-Hansen</i>	307
Some kinetic and force dispositions of an isometrically contracted muscle in athletes of different sport disciplines	<i>V. Karun, S. Otáhal, and E. Morávková</i>	312
Preliminary investigations of the role of electric and electrochemical factors involved in the action of the muscle and nerve stimulators	<i>H. Borowski, E. B. Werański, and M. Kacprzak</i>	319

Prosthesis and joint replacement

General Lecture Bion mechanics of endoprosthesis design	<i>H. Jansons</i>	327
Gait analysis in patients with hip prosthesis	<i>A. Pedotti and G. C. Santambrogio</i>	339

VIII Contents

Analytical and experimental study of stresses and strains in the human femur — before and after joint replacement <i>A. Rohmann, G. Bergmann, and A. Kölbl</i>	347
The interface analysis of "soft-suit" orthosis <i>F. Gračanić, D. Popović, and A. Tomović,</i>	354
Elimination of muscular forces and infections pseudoarthroses in below knee fractures with external fixator "Rozi" <i>V. Kostovski</i>	362
Biomechanics for evaluation of the durability of an endoprosthesis <i>J. Vitka, H. Jansons, and R. Žagar</i>	369
Mechanical stress distribution in stems of implants <i>P. M. Calderale, M. M. Gola, and A. Gugliotta</i>	373
New design of the self-locking knee disarticulation prosthesis <i>J. Lipka, T. Kłosowiak, and W. Świątek</i>	380
The altered alignment influence on above-knee prosthesis socket pressure distribution <i>A. Hielefeldt and H. J. Schreck</i>	387

Man-machine systems

An electronic hybrid device for the control of hand functions by electrical stimulation methods <i>M. Weiss, A. Marecki, J. Kiwerski, and R. Pajniczek</i>	397
Control coordinates for telemanipulation <i>H. H. Kwee and J. Guistet</i>	405
Biomechanics of wheel chair propulsion <i>S. Cerquighini, F. Figura, M. Murchetti, and B. Ricci</i>	410
The structure of controlled movements of biomechanical limbs <i>V. V. Kuznetsov</i>	427
Below-elbow prosthesis with bioelectrical control for children, aged 4–12 <i>N. J. Kondrashin, L. M. Vaskobotnikova, E. P. Polyak, and O. E. Feldman</i>	427
Algorithm of the vector optimization of the simple movements of multi-link manipulator <i>R. Gawronski and B. Mucukow</i>	430
The influence of resonant frequencies of the biomechanical hand-arm system on the design of manual control devices <i>K. P. Gärtner</i>	440
Glottal control microsystem <i>F. Lhote and P. Andre</i>	445

Rehabilitation

Vertical ground reaction force-time histories of lower extremity amputee runners <i>D. I. Miller, R. M. Enoka, R. G. McCulloch, E. M. Burgess, and V. H. Frankel</i>	453
A biomechanical study of locomotion by hemiplegic patients <i>S. Baccardi, C. Frigo, J. Tesio, and A. Pedotti</i>	461

Measurement techniques

Measurement of limb movement coordination in cats using universal computer image processing system CPO-2 <i>Z. Kulpo and A. Gutowska</i>	471
---	-----

Measurement methods of upper limb movements <i>M. Benati, P. Morasso, V. Tagliasso, T. Vernazza, and R. Zaccaria</i>	478
Ultrasonic devices for kinematic movement analysis <i>E. M. Henning, H. J. Hellmann, and K. Binder</i>	483
Calibration techniques for precise measurement and recording of human spatial movements with an optoelectronic system <i>K.-P. Holzhausen</i>	489
Biomechanical analysis of a knee joint: spatial kinematics measurements <i>F. Blesbois, J. F. Deze and B. Landjerit</i> ,	496
Digital speedometry computer-assisted speed measurements based on pulse technique <i>W. Gateworf, M. Sust, and H. Peuker</i>	503
Some peculiarities in measurement of dynamic processes in biomechanics <i>V. V. Bagreev and M. V. Trahimovitch</i>	511
Electro-mechanical device for measuring the movements of the upper limbs <i>Y. Toshev, A. Sapunov, H. Konstantinov, and J. Avramov</i>	514

Measurement methods

General Lecture Development and problems of methodology in biomechanics research <i>H. Matsui</i>	521
Problems and indications for computered tomography (CT) in orthopaedics <i>F. L��er, N. Graf Steinb��ck-Fermor, and D. Wulf</i>	528
ADL motion analyses by 'scispot' <i>Y. Suzuki, K. Tsuchiya, and M. Takahashi</i>	533
Infrared emitting device for telemetry application <i>H. Albert, E. M. Henning, and V. Aisslinger</i>	539
Development and testing of a clinical capillary blood viscometer <i>J. W. Wielogorski</i>	544
Device for high resolution force distribution-measurement <i>U. Aisslinger, K. Nicol, and R. Preiss</i>	548
Capacitance type force measuring system—methods and applications <i>K. Nicol, R. Preiss, and H. Albert</i>	553
Models and methods for the determination of the center of gravity of the human body from film <i>V. V. Sijfuen, A. J. Spaepen, and E. J. Willems</i>	558
Time series analysis on R-R intervals of electrocardiogram in running using autoregressive model <i>S. Takeuchi, M. Ichikawa, Y. Watanabe, and K. Takata</i>	565
Method for kinematic and analysis of complex two-dimensional movements <i>T. K��ldi and K. P��tzy</i>	572

Miscellaneous

A recurrent method for kinematic investigation of biomechanical manipulators with a large number of degrees of freedom <i>M. Konstantinov, J. Avramov, V. Mihailov, A. Sapunov and Y. Toshev</i>	579
Precision limits on derivatives obtained from measurement data <i>H. Lanshammar</i>	586
Measurements of dynamic force parameters <i>K. Bretz and Z. Baksay</i>	593

X Contents

Application of biomechanics to the study of machines in the USSR <i>M. K. Uskov</i>	598
Biomechanical aspects of a system for arrestment of motion <i>E. Zlobro, A. Poplawski, and E. Jaskólski</i>	602
Numerical study of viscous flow in deforming tube <i>V. M. Zaiko and I. M. Starobin</i>	609
Investigations on non-Euclidean biomechanics. Projective geometry, Fibonacci numbers and the kinematic scheme of human body <i>S. V. Petukhov</i>	617

Abstracts

Human factors in construction equipment <i>A. S. Massinas, G. Massouras, and P. A. Drakatos</i>	625
Optimal coordination of man and machine in the biotechnical control system <i>I. L. Sluskii</i>	625
The permissible errors analysis of dynamometric platforms and the definition of methodological error values while measuring force in high jumps <i>V. P. Korolev</i>	626
The new concept of internal architecture of tendon <i>L. Jozsa and J. B. Bahini</i>	627
The mass and inertia characteristics of main segments of human body <i>V. M. Zaslorsky and V. Selivanov</i>	628
Acknowledgments	629
Organization	631
Exhibitors	634
