<b>Introduction</b> . . . . .	1
Work Physiology . . . . .	1
A. Problems and Tasks of Work Physiology . . . . .	2
B. Work Physiology and Technology . . . . .	3
C. Work Physiology and Economics . . . . .	4
Sport Physiology . . . . .	5
<b>1 Muscle Activity</b> . . . . .	7
1.1 <b>Structure of Muscle</b> . . . . .	7
1.1.1 Mitochondria and Sarcoplasm . . . . .	10
1.2 <b>General Fundamentals of Excitation</b> . . . . .	10
1.2.1 Resting Membrane Potential . . . . .	10
1.2.2 Local Excitation . . . . .	12
1.2.3 Transmitted Excitation . . . . .	12
1.3 <b>Excitation and Contraction of the Muscle Fiber</b> . . . . .	14
1.4 <b>Fundamentals of Electromechanical Coupling</b> . . . . .	15
1.5 <b>Mechanical Characteristics of Muscle Fibers</b> . . . . .	17
1.5.1 Reactions to Passive Stretching . . . . .	17
1.5.2 Reactions during Active Shortening . . . . .	19
1.6 <b>Fundamentals of Motor Activity</b> . . . . .	23
1.6.1 Structure and Function of Neurons . . . . .	23
1.6.2 Structure and Function of Synapses . . . . .	24
1.6.3 Inhibition, Facilitation and Summation in the Neural Network . . . . .	25
1.6.4 Structure and Function of the Muscle Spindle System (Monosynaptic Reflex) . . . . .	26
1.6.5 Polysynaptic Motor Reflex . . . . .	30
1.6.6 Pyramidal and Extrapyramidal Systems . . . . .	31
1.6.7 Influence of the Organs of Equilibrium on Motor Activity . . . . .	37
1.6.8 Motor Learning . . . . .	39
1.6.9 Economical Use of Muscle Strength . . . . .	41

1.7	<b>Energy-Supplying Processes for Muscle Activity</b> . . . . .	44
1.7.1	Role of the Energy-Rich Phosphates . . . . .	44
1.7.2	Degradation of Carbohydrates . . . . .	45
1.7.3	Citric Acid Cycle and Respiratory Chain . . . . .	47
1.7.4	Interchange among the Energy-Supplying Systems . . . . .	50
1.7.5	Restitution of Reserves after Exercise . . . . .	57
1.7.6	Muscle Fatigue as a Disturbance of Biochemical Equilibrium . . . . .	58
1.8	<b>Fundamentals of Energy Metabolism Measurement</b> . . . . .	59
1.8.1	Direct Calorimetry . . . . .	59
1.8.2	Indirect Calorimetry . . . . .	60
1.8.3	Important Sources of Error in Indirect Calorimetry . . . . .	62
1.9	<b>Energy Metabolism and Physical Work</b> . . . . .	63
1.9.1	Basal Metabolism . . . . .	63
1.9.2	Resting Metabolism . . . . .	63
1.9.3	Work Metabolism . . . . .	63
1.9.4	Work Loads and Their Limits . . . . .	75
1.10	<b>Nutrition and Performance</b> . . . . .	76
1.10.1	Caloric Value of Nutrients . . . . .	78
1.10.2	Carbohydrate and Fat Requirements . . . . .	79
1.10.3	Protein Requirements . . . . .	80
1.10.4	Requirements of Vitamins and Trace Elements . . . . .	85
1.10.5	Diet and Performance . . . . .	88
1.10.6	Nutrient Content and Utilization of Foodstuffs . . . . .	88
<b>2</b>	<b>Circulatory System and Work</b> . . . . .	90
2.1	<b>Oxygen Transport</b> . . . . .	90
2.1.1	Oxygen Dissociation Curve . . . . .	91
2.1.2	Factors Influencing the O <sub>2</sub> Dissociation Curve . . . . .	93
2.2	<b>Transport of Carbon Dioxide</b> . . . . .	96
2.2.1	CO <sub>2</sub> Dissociation Curve . . . . .	97
2.2.2	Factors Influencing the CO <sub>2</sub> Dissociation Curve . . . . .	97
2.2.3	Review of CO <sub>2</sub> Transport . . . . .	98
2.3	<b>Transport of Heat, Nutrients and Fixed Metabolic End Products</b> . . . . .	99
2.4	<b>Blood Flow and Muscle Supply</b> . . . . .	100
2.4.1	Adjustment of Local Muscle Blood Flow (Control System) . . . . .	101
2.4.2	Problem of Adequate Stimulation for Blood Flow Control . . . . .	102

2.5	<b>Cardiovascular System</b> . . . . .	104
2.5.1	Basic Characteristics of the Myocardium . . . . .	104
2.5.2	Myocardial Supply. . . . .	106
2.5.3	Action of Myocardial Nerves . . . . .	106
2.5.4	Electrocardiogram. . . . .	106
2.5.5	The Heart as a Pump . . . . .	108
2.6	<b>Blood Pressure Control in the Arterial System</b> . . . . .	111
2.6.1	Characteristics of the Controlled Process . . . . .	111
2.6.2	Characteristics of the Sensor. . . . .	113
2.6.3	Behavior of Open and Closed Control Loops . . . . .	113
2.6.4	Effectiveness of Control . . . . .	115
2.6.5	Effect of Blood Pressure on Blood Vessels . . . . .	119
2.6.6	Resting Blood Pressure as a Function of Age . . . . .	119
2.7	<b>Regulation of Blood Volume</b> . . . . .	120
2.8	<b>Adjustment of the Circulatory System to Work</b> . . . . .	122
2.8.1	Behavior of Heart Rate during Work . . . . .	123
2.8.2	Behavior of Heart Rate after Work . . . . .	125
2.8.3	Review of the Possible Mechanisms of Heart Rate Regulation during Work . . . . .	125
2.8.4	Nature of Adequate Stimulation of Muscle Receptors . . . . .	133
2.8.5	Cardiac Output and Work . . . . .	138
2.8.6	Blood Pressure during Physical Work . . . . .	140
2.8.7	Sex-Related Differences in Individual Circulatory Variables. . . . .	141
<b>3</b>	<b>Respiration</b> . . . . .	142
3.1	<b>Work of Breathing and the Energy Metabolism Required</b> . . . . .	142
3.2	<b>Gas Exchange</b> . . . . .	145
3.3	<b>Respiratory Dead Space and the Concept of Alveolar Ventilation</b> . . . . .	147
3.4	<b>Relationship between CO<sub>2</sub> Dissociation and Buffering</b> . . . . .	151
3.5	<b>Influence of Lactic Acid on Acid-Base Balance In Vitro and In Vivo</b> . . . . .	154
3.6	<b>Estimation of Acid-Base Status from Standard Bicarbonate</b> . . . . .	155
3.6.1	Practical Determination of Acid-Base Balance . . . . .	156

3.7	<b>Control of Breathing</b> . . . . .	157
3.7.1	Control of $P_{CO_2}$ . . . . .	159
3.7.1	Effect of Oxygen Deficiency and pH Reduction on the $CO_2$ Response Curve . . . . .	161
3.7.3	Influence of Work on the $CO_2$ Response Curve . . . . .	162
3.7.4	Behavior of Respiratory Parameters during Mild and Severe Physical Work . . . . .	165
3.8	<b>Adjustment of the Breathing Pattern</b> . . . . .	166
<b>4</b>	<b>Effect of Environmental Factors on the Physiology of Work Performance</b> . . . . .	168
4.1	<b>Effect of Acute and Chronic Oxygen Deficiency on Man</b> . . . . .	168
4.1.1	Sudden Acute Oxygen Deficiency . . . . .	168
4.2	<b>Relationships between Altitude and Oxygen Pressure</b> . . . . .	171
4.2.1	Acute Oxygen Deficiency . . . . .	173
4.2.2	Chronic Oxygen Deficiency and Altitude Acclimatization . . . . .	175
4.2.3	Work Capacity during Oxygen Deficiency . . . . .	180
4.3	<b>Influence of Climate on Man</b> . . . . .	181
4.3.1	Heat Exchange between Body Surface and the Environment . . . . .	184
4.4	<b>Body Temperature and Heat Balance</b> . . . . .	187
4.4.1	Heat Production . . . . .	188
4.4.2	Heat Loss . . . . .	189
4.4.3	Thermoregulation . . . . .	194
4.5	<b>Acclimatization</b> . . . . .	194
4.6	<b>Salt and Water Balance</b> . . . . .	196
4.6.1	Distribution of Water in the Organism . . . . .	196
4.6.2	Movement of Water in the Body . . . . .	198
4.6.3	Disturbances in Water Balance . . . . .	199
4.6.4	Water Balance and its Regulation . . . . .	200
4.7	<b>Physiology of Weightlessness</b> . . . . .	201
4.7.1	General Physical and Physiologic Remarks . . . . .	201
4.7.2	Hemodynamic Effects of Weightlessness . . . . .	204
4.7.3	Physiologic Effects of Simulated Weightlessness . . . . .	205
4.7.4	Performance Capacity and Weightlessness . . . . .	209
4.7.5	Orthostatic Tolerance and Weightlessness . . . . .	211
4.7.6	Effects of Actual Weightlessness . . . . .	213

<b>X</b>	<b>Contents</b>	
4.8	<b>Physiology of Diving and Swimming</b> . . . . .	214
4.8.1	General Physical and Physiologic Remarks about Diving . . . . .	214
4.8.2	Apneic Diving . . . . .	214
4.8.3	Diving with an Apparatus . . . . .	223
4.8.4	Body Temperature in the Water . . . . .	225
4.8.5	Effect of Swimming on Body Core Temperature in Cold Water . . . . .	227
4.8.6	Mechanical Work, Energy Metabolism and Efficiency in Swimming . . . . .	228
<b>5</b>	<b>Physical Performance Capacity</b> . . . . .	231
5.1	<b>Fundamentals</b> . . . . .	231
5.2	<b>Maximal Performance Capacity</b> . . . . .	236
5.2.1	Aerobic Power (Maximal O <sub>2</sub> Intake) . . . . .	236
5.2.2	Determination of Maximal O <sub>2</sub> Intake . . . . .	237
5.2.3	Calculated Maximal Aerobic Power . . . . .	239
5.3	<b>Endurance Performance Capacity</b> . . . . .	242
5.3.1	Estimation of Performance Capacity from the Pattern of the "Oxygen Pulse" . . . . .	246
5.3.2	Estimation of Performance Capacity with the "Performance Heart-Rate Index" of Müller . . . . .	246
5.4	<b>Muscle Fatigue</b> . . . . .	249
5.4.1	Measurement of Muscle Fatigue . . . . .	250
5.4.2	Muscle Fatigue and Work-Rest Ratios . . . . .	250
5.4.3	Recovery by Changing Muscle Groups during Dynamic Work . . . . .	252
5.5	<b>Work Capacity and Fatigue during Static Work</b> . . . . .	254
5.6	<b>Reduction of Work Capacity due to Central Fatigue</b> . . . . .	257
<b>6</b>	<b>Improved Performance via Work Patterns, Practice and Training</b> . . . . .	258
6.1	<b>Improved Performance through Economic Patterns of Work and Movement</b> . . . . .	258
6.2	<b>Improvement of Performance Capacity through Practice</b> . . . . .	264
6.3	<b>Increased Performance Capacity through Training</b> . . . . .	266
6.3.1	Principles of Long-Term Adaptation of Performance Capacity . . . . .	267

6.3.2	Fundamentals of Isometric Strength Training . . . . .	269
6.3.3	Fundamentals of Training for Speed . . . . .	277
6.3.4	Fundamentals of Training for Endurance . . . . .	277
<b>7</b>	<b>Basic Concepts of Biologic Regulation (Biologic Cybernetics)</b> . . . . .	301
7.1	<b>Construction of a Servocontrol Loop</b> . . . . .	301
7.2	<b>Characteristics of a Technical Regulator</b> . . . . .	303
7.2.1	P Regulator . . . . .	304
7.2.2	PD Regulator . . . . .	304
7.2.3	I Regulator . . . . .	305
7.2.4	Transfer Function of the Open Servocontrol Loop. . . . .	305
7.2.5	Polar Plot of the Frequency Response of the Open Servocontrol Loop. . . . .	306
7.2.6	Nyquist Stability Criteria . . . . .	307
7.3	<b>Biologic Servocontrol Loops</b> . . . . .	308
<b>8</b>	<b>Methods of Energy Metabolism Measurement</b> . . . . .	309
8.1	<b>Open Systems</b> . . . . .	309
8.2	<b>Metabolic Measurements with the Closed System</b> . . . . .	313
8.3	<b>Computer-Controlled Spiroergometry using the Method of Breath-by-Breath Analysis</b> . . . . .	315
8.3.1	Theoretical Foundations of the Procedure . . . . .	315
8.3.2	Practical Performance of the Measurement with a Process Computer, a Mass Spectrometer and a Pneumotachograph . . . . .	316
8.3.3	Calibration of the Individual Measurements . . . . .	317
8.3.4	Determination of the Delay Periods of the Apparatus . . . . .	319
8.3.5	Determination of the Duration of Breathing. . . . .	320
8.3.6	Measurement and Calculation of the Spiroergometric Variables . . . . .	321
8.3.7	Determination of the End-Tidal Gas Pressures and Adjustment of the Inspiratory Gas Pressures . . . . .	322
8.3.8	Programmable Performance Adjustment . . . . .	324
8.3.9	Off-Line Representation of the Results . . . . .	324
	<b>Terminology</b> . . . . .	326
	<b>Index</b> . . . . .	336
