

## TRACE ELEMENTS IN HUMAN NUTRITION AND HEALTH

3 2	Metabolic and functional aspects of bioavailability	28
3 2 1	Multielement interactions involving iron	28
3 2 2	Tissue anabolism/catabolism and utilization of tissue zinc	29
3 2 3	Selenium status and iodine utilization	29*
3 2 4	Other functional interactions	30
3 3	Interactions limiting element mobility	30
3 3 1	Interactions involving dietary phytate and other inositol phosphates	30
3 3 2	Influence of phytate/protein interactions on zinc availability	33
3 3 3	Interactions of phytate with other metals	33
3 3 4	Iron-related antagonistic interactions	34
3.3.5	Other factors influencing element mobility and utilization	36
3 3 6	Other extrinsic variables influencing bioavailability	36
3.4	Conclusions and nutritional implications	37
3 4.1	Copper	38
3 4.2	Iodine	39
3 4.3	Lead and cadmium	40
3 4.4	Selenium	40
3 4 5	Zinc	41
	References	41
