

CONTENTS

Preface	9
Contributors	10
Introductory note	11

Fundamentals of general surgery

1 Basic principles and techniques	15
Asepsis	
Preparation for surgery	
Prevention of transmission of human immunodeficiency virus (HIV)	
Surgical methods and materials	
Wound débridement	
Incision and drainage of abscesses	
Split-skin grafting	
2 Fluid and electrolyte therapy, blood transfusion, and management of shock	36
Fluid and electrolyte therapy	
Blood transfusion	
Shock	

Face and neck

3 Primary care of wounds of the face	49
General principles	
Lip	
Tongue	
Ear and nose	
Cellulitis of the face	
4 Eye	53
Basic principles and procedures for eye surgery	
Ocular trauma	
Extraocular surgery	
Intraocular surgery	
Enucleation of the eye	

5	Ear	72
	Removal of foreign bodies	
	Myringotomy	
	Acute mastoiditis with abscess	
6	Nose	76
	Control of epistaxis	
	Removal of foreign bodies	
7	Teeth and jaws	78
	Extraction of teeth	
	The barrel bandage	
	Fractures of the jaw	
8	Throat	84
	Incision and drainage of peritonsillar abscess	
	Incision and drainage of retropharyngeal abscess	
	Incision and drainage of acute abscess of the neck	

Chest, abdomen, and gastrointestinal tract

9	Chest	89
	Tracheostomy	
	Underwater-seal chest drainage	
	Simple rib fracture	
	Flail chest	
	Pneumothorax	
	Haemothorax	
	Acute empyema	
	Surgical emphysema and mediastinal injuries	
	Incision and drainage of breast abscess	
10	Abdomen (general)	100
	Laparotomy	
	Repair of burst abdomen	
	Abdominal injuries	
11	Stomach and duodenum	113
	Feeding gastrostomy	
	Perforated peptic ulcer	
12	Gallbladder and spleen	119
	Cholecystostomy	
	Ruptured spleen	
13	Small intestine	125
	Resection and end-to-end anastomosis	
	Repair of typhoid perforation of the ileum	

14	Appendix Acute appendicitis Appendicular abscess Appendicular mass	130
15	Colon Colostomy Sigmoid volvulus	135
16	Anus and rectum Rectal examination Proctoscopy Sigmoidoscopy Haemorrhoids Anal fissure Incision and drainage of perianal and ischiorectal abscesses Rectal prolapse	141
17	Herniae Inguinal hernia Femoral hernia Strangulated groin hernia Umbilical and paraumbilical hernia Epigastric hernia Incisional hernia	151

Urogenital system¹

18	Urinary bladder Drainage Management of ruptured bladder	167
19	Male urethra Urethral dilatation Rupture of the urethra	177
20	Male genital organs Scrotal hydrocele Circumcision Vasectomy Exploration of scrotal contents	181

Paediatric surgery

21	General principles for paediatric surgery Special considerations Cut-down to umbilical vein	193
-----------	--	-----

¹For detailed descriptions of obstetric and gynaecological procedures, see *Surgery at the district hospital: obstetrics, gynaecology, orthopaedics, and traumatology* (Geneva, World Health Organization, in preparation).

22	Abdominal wall and gastrointestinal tract	196
	Operative reduction of intussusception	
	Rectal prolapse	
	Relief of strangulated inguinal hernia	
23	Urethra and genital organs	201
	Meatal dilatation	
	Exploration of scrotal contents	
	Treatment of paraphimosis	
	Annex 1 Surgical trays	205
	Annex 2 Essential surgical instruments, equipment, and materials for the district hospital	217
	Index	227
