Preface	7
<b>1 Introduction</b>	<b>9</b>
<b>2 Fundamental techniques and skills</b>	<b>11</b>
Assessment of the critically ill and/or unconscious patient	
Care of the airway	
Failed intubation	
Care of the patient whose breathing is inadequate	
Management of the circulation	
Assessment of the effects of treatment	
Transportation of the critically ill patient	
When to abandon resuscitation	
The severely injured patient	
<b>3 Care of unconscious and anaesthetized patients</b>	<b>31</b>
General management	
Respiratory function in the anaesthetized patient	
The cardiovascular system	
Management of unexpected cardiorespiratory arrest	
<b>4 Principles of fluid and electrolyte therapy</b>	<b>41</b>
Fluid compartments of the body	
Fluid therapy	
Clinical assessment of fluid status	
Estimation of blood losses during surgery	
Specific losses and replacement	
Production of sterile fluids for intravenous use	
<b>5 Assessing the patient before anaesthesia</b>	<b>46</b>
Examining the patient	
Premedication for anaesthesia and surgery	
<b>6 General anaesthesia</b>	<b>51</b>
Before induction of anaesthesia	
Intravenous induction	
Intramuscular induction	
Inhalational induction	
<b>7 Apparatus used for inhalational anaesthesia</b>	<b>58</b>
Draw-over apparatus	
Continuous-flow machines	
<b>8 Specimen general anaesthetic techniques</b>	<b>74</b>
General inhalational anaesthesia	
Ketamine anaesthesia	
General anaesthesia for emergency cases	

<b>9 Drugs used in general anaesthesia</b>	79
Inhalational agents	
Intravenous anaesthetics	
Opiate drugs	
Muscle relaxant drugs	
<b>10 Conduction anaesthesia</b>	86
Toxicity and safety of local anaesthetic drugs	
Contraindications to conduction anaesthesia	
General precautions and basic equipment	
Specimen techniques	
<b>11 Choosing and planning your anaesthetic technique</b>	102
Choice of anaesthetic technique for a particular operation	
Planning general anaesthesia	
Safety of general and conduction techniques	
<b>12 Postoperative care of the patient</b>	106
<b>13 Paediatric and obstetric anaesthesia</b>	108
Anaesthesia for children	
Anaesthesia during pregnancy and for operative delivery	
Resuscitation of the newborn infant	
<b>14 Important medical conditions for the anaesthetist</b>	117
Anaemia	
Haemoglobinopathies	
Cardiovascular diseases	
Respiratory diseases	
Diabetes	
Obesity	
Malnutrition	
Chronic renal failure	
<b>15 Supplies and equipment</b>	126
Gas supplies	
Drugs	
Anaesthetic equipment	
Storage and maintenance of equipment	
Annex 1 Check-list for draw-over anaesthetic apparatus	131
Annex 2 Check-list for continuous-flow (Boyle's) anaesthetic apparatus	132
Annex 3 Anaesthesia record	134
Annex 4 Drugs used in anaesthesia	136
Index	139
