

Contents

Part One

What Histology Is and How It Is Studied

1. THE NATURE AND THE SCOPE OF HISTOLOGY; ITS INTEGRATION WITH OTHER BIOLOGIC SUBJECTS; THE ROUTE FOLLOWED IN ITS STUDY	3
2. HOW HISTOLOGY IS STUDIED	7
The Paraffin Technic	7
The Chemical Components of the Body and How They Are Affected by the Procedures Just Described	10
The Staining of Sections	14
Other Ways of Preparing Sections	15
3. THE STUDY AND THE INTERPRETATION OF SECTIONS	17
Why 3-Dimensional Visualization Is Necessary in Histology	17
How Reconstructions Are Made	17
Some Aids To Making Mental Reconstructions	18
How To Study a Section	19
4. SPECIAL METHODS USED FOR STUDYING HISTOLOGY AND CELL BIOLOGY	28
Histochemistry—Some Examples of Representative Technics	29
Radioautography	31
Microincineration	35
Immunofluorescence Technics	37
The Electron Microscope	39
The Use of the Interference and the Phase Microscopes for the Study of Living Unstained Tissue	48
Ways in Which Living or Fresh Tissue Can Be Studied Outside the Body or in the Living Body	51

Part Two

Cell Structure and Cell Biology

5. GENERAL FEATURES OF CELLS	57
Introduction	57
The Physiologic Properties of Protoplasm	58
Differentiation—The Process Whereby Cells Become Specialized	59
Some Generalizations About the Consequences of Differentiation (Cell Specialization)	60
6. NUCLEI	64
The Microscopic Study of Cells in Sections in the Laboratory	64
How Nuclei Appear in Sections	65

6. NUCLEI—(<i>Continued</i>)	
The Chromatin of the Interphase Nucleus	66
How the Body Cells of Females Can Be Distinguished From Those of Males by Examining the Chromatin of Interphase Nuclei	68
Chromatin and Chromosomes; the Changes That Occur in Cell Division (Mitosis)	71
The Phases of Mitosis	74
Effects of Colchicine on Mitosis	80
The Morphology of Metaphase Chromosomes and Their Classification	81
Polyploidy	85
Chemistry and Histochemistry of Chromatin and Chromosomes	86
Introduction to Chemistry of Genetic Material; How Information Is Stored in DNA	88
The Chemical Basis of Genes	89
How DNA Molecules Are Duplicated	90
The Study of DNA Synthesis by the Use of a Radioactive Label and Radio- autographs	91
Some Matters That Have Been Clarified by Labeling Nuclei with Radioactive Thymidine	93
The Fine Structure of Chromosomes	97
Effect of Radiation on Chromosomes and Mitosis	98
How Genetic Information in the Chromosomes Is Made Operative in the Cell	99
Nucleoli	102
The Nuclear Membrane (Also Termed the Nuclear Envelope)	107
Nuclear Sap	109
Nuclear Changes Indicative of Cell Death	112
7. THE CYTOPLASM	115
Organelles and Inclusions	115
The Golgi Apparatus	127
The Fine Structure of the Golgi Apparatus	129
Lysosomes	142
Cytoplasmic Inclusions	145
Significance of the Newer Knowledge About Cells to the Problem of Cell Differentiation	152

Part Three

The Four Primary Tissues and Their Subdivisions

8. THE FOUR PRIMARY TISSUES; EPITHELIAL TISSUE	165
Introduction	165
A Suggestion on How To Study the Tissues	165
Epithelial Tissue	165
Embryologic Origin of Epithelium	167
Types of Epithelium Found on Wet Surfaces	170
The Internal Support in Epithelial Cells and How Epithelial Cells Are Held Together in Membranes	174
Stratified Epithelial Membranes	184
9. EPITHELIAL TISSUE—(<i>Continued</i>)	188
Epithelial Glands	188

10. CONNECTIVE TISSUE	200
Introduction	200
Loose Ordinary Connective Tissue	200
The Intercellular Substances of Loose Connective Tissue	203
Collagenic Fibers	203
Elastic Fibers	208
Reticular Fibers	208
The Amorphous Intercellular Substance of Loose Connective Tissue	209
The Staining of the Ground Substance of Loose Connective Tissue (Hyaluronic Acid)	210
Tissue Fluid	211
Hydrostatic Pressure and the Formation of Tissue Fluid	213
Absorption of Tissue Fluid	214
Edema	216
Some Causes of Edema	216
Intercellular Substances and Aging	221
11. THE CELLS OF LOOSE ORDINARY CONNECTIVE TISSUE	224
The Development of Connective Tissue	224
The Cells of Loose Ordinary Connective Tissue	226
Features of Plasma Cells	238
Mast Cells, Histamine, Anaphylaxis and Allergy	246
Dense Ordinary Connective Tissue	251
12. THE CELLS OF BLOOD	257
Leukocytes	257
The Basis for Classifying Leukocytes	259
The Study of Leukocytes in a Stained Blood Film	261
Granular Leukocytes	262
Nongranular Leukocytes	270
The Life Span and the Functions of Lymphocytes	273
The Functions of Lymphocytes	275
Sensitivity of Lymphocytes to Radiation and Radiomimetic Drugs	281
Some Problems Associated With Identifying Certain Leukocytes Seen in a Blood Film	283
13. THE CELLS OF BLOOD—(<i>Continued</i>)	287
Red Blood Cells (Erythrocytes)	287
14. PLATELETS AND FIBRIN	298
The Two Basic Hemostatic Mechanisms	298
The Formation of Platelet Plugs That Seal Off Blood Vessels	298
Coagulation	300
Coagulation and Its Dependence on Extrinsic or Intrinsic Factors	301
The Study of Platelets in the Laboratory	302
How Platelets Are Counted	304
The Formation and Life-Span of Platelets	304
A Few Examples of Defects in Hemostatic Mechanisms	305
15. HEMOPOIETIC TISSUE	308
Some General Considerations	308
Lymphatic Tissue	309
Lymph Nodes	313
The Spleen	327
The Thymus	338

xii Contents

16. HEMOPOIETIC TISSUE—(Continued)	351
Myeloid Tissue	351
The Development of Myeloid Tissue	351
The Cells That Form Along Line 1	352
The Appearance of Sinusoids in Sections	353
How the Production of Free Cells Is Maintained	355
Other Cells in Bone Marrow	369
The Study of Bone Marrow in Clinical Medicine	370
17. THE SUPPORTING CONNECTIVE TISSUES: CARTILAGE AND BONE	373
Cartilage	373
The Development of Cartilage	377
The Growth of Cartilage	377
Nutrition of Cartilage	378
General Considerations About the Transplantation of Cartilage	381
18. BONE	384
The Differences Between Calcified Cartilage and Bone	384
Special Types of Preparations Are Required for a Rounded-Out Study of Bone	387
The Development of Bone	388
What Is Meant by the Terms Intramembranous, Endochondral and Heterotopic Ossification	393
Intramembranous Ossification	394
Bone Growth and Bone Resorption	398
The Different Appearances Presented by Bone Surfaces on Which Bone Deposition of Bone Resorption Is Occurring	400
Osteoclasts	402
The Further Growth of the Skull	407
Endochondral Ossification	408
The Growth of a Long Bone as a Whole	420
How Shafts of Bone Grow in Width	424
The Remodeling of Compact Bone That Occurs Throughout Life	428
How Certain Nutritional and Metabolic Factors Can Affect Growing Bones and the Structure of Bones in the Adult	431
Periosteum and Endosteum	436
Wolff's Law	436
The Repair of Fractures	436
The Repair of a Simple Fracture	437
The Transplantation of Bone	444
Transplants of Cancellous Bone	447
The Blood Supply of a Long Bone and Its Various Parts	449
The Blood Supply of the Metaphysis of a Growing Bone	450
19. JOINTS	458
Introduction	458
Syndesmoses	459
Synchondroses	460
Synostoses	460
Synovial Joints	462
20. MUSCULAR TISSUE	476
Classification of Muscle	477
Smooth Muscle	477
Striated, Skeletal or Voluntary Muscle	482
Development and Growth of Striated Muscle Fibers	494

20. MUSCULAR TISSUE—(<i>Continued</i>)	
How Striated Muscles Are Harnessed	496
Blood Vessels and Lymphatics	497
The Efferent Innervation of Striated Muscle	498
Cardiac Muscle	501
21. NERVOUS TISSUE AND THE NERVOUS SYSTEM	507
Preliminary Considerations	507
An Account (In Which Important New Terms Are Introduced) of Some Steps in the Evolution of Nervous Tissue	508
The Development of the Central Nervous Tissue	516
Morphogenesis of the Spinal Cord	517
Morphogenesis of the Brain	518
Histogenesis of the Spinal Cord	520
Differentiation of the Inner Layer and the Formation of the Ependyma	520
Differentiation in the Middle Layer and the Formation of Gray Matter	522
Differentiation in the Outer Layer and the Formation of White Matter	522
Histogenesis of Nervous Tissue of Brain	525
The Cells of the Nervous Tissue of the C.N.S.	526
Microscopic Structure of the Spinal Cord	538
Microscopic Structure of Some Parts of the Brain	541
The Meninges	546
Formation, Circulation and Absorption of Cerebrospinal Fluid	549
The Peripheral Nervous System	551
The Development of the P.N.S.	553
Microscopic Structure of Spinal Ganglia	554
Microscopic Structure of Peripheral Nerves	555
Nerve Injuries and the Degeneration and the Regeneration of Peripheral Nerves	564
The Autonomic Nervous System	567

Part Four

The Histology of the Systems

22. THE CIRCULATORY SYSTEM	581
Some Mechanical Problems Inherent in a Circulatory System	581
The Microscopic Structure of Arteries	583
Nervous Control of Arteries and Arterial Pressure	588
The Microscopic Structure of Capillaries	590
Control of the Capillary Circulation	591
The Fine Structure of Capillaries and Venules	594
Veins	596
The Transplantation of Blood Vessels	599
Arteriovenous Anastomoses	600
Heart	600
Impulse-Conducting System of the Heart	604
The Lymphatic Division of the Circulatory System	609
23. THE INTEGUMENTARY SYSTEM (The Skin and Its Appendages)	613
Introduction	613
General Microscopic Structure	613
Microscopic Structure of the Thick Skin	615
Microscopic Structure of the Thin Skin	621

23. THE INTEGUMENTARY SYSTEM (The Skin and Its Appendages)—(<i>Continued</i>)	
Hair Follicles	623
Sebaceous Glands	630
Pigmentation of the Skin	632
Blood Supply of the Skin	635
Skin Grafting	638
Nails	640
24. THE DIGESTIVE SYSTEM	645
Introduction	645
The Lips	647
The Cheeks	648
The Tongue	648
The Teeth	652
The Salivary Glands	669
The Hard Palate	671
The Soft Palate	671
The Pharynx	672
The Palatine Tonsils	673
General Plan of the Gastrointestinal Tract	674
The Esophagus	678
The Stomach	680
Fine Structure	684
The Small Intestine	688
The Large Intestine	697
25. PANCREAS, LIVER AND GALLBLADDER	706
The Pancreas	706
The Liver	711
Some Functions of the Liver Dependent on Its Structure and Position	712
The Liver Acinus	721
The Cytology and Fine Structure of the Liver	726
The Cytoplasm of Hepatic Cells	727
The Gallbladder	737
A Note on Jaundice	739
26. THE RESPIRATORY SYSTEM	744
Introduction	744
The Nasal Cavities	746
Paranasal Air Sinuses of the Nose	748
The Pharyngeal Tonsil	749
The Larynx	749
The Trachea	751
The Bronchial Tree	752
The Development of the Lungs	763
Innervation of the Smooth Muscles of the Bronchi and the Bronchioles	768
27. THE URINARY SYSTEM	772
Some General Considerations	772
The Basic Mechanisms of Excretory Tubules	772
The Nephrons of Higher Animals and How They Function	773
The Unilobar (Unipyramidal) Kidney	775
Lobules and Medullary Rays	778
The Multipyramidal or Multilobar Kidney of Man	779
The Nephron of the Kidney of Man: Its Parts and Their Functions	781

27. THE URINARY SYSTEM—(<i>Continued</i>)	
The Proximal Tubule	795
Loops of Henle	799
The Distal Convoluted Tubule	800
Other Features of the Kidney	800
The Circulation of Blood Through the Kidney	802
Lymphatics of the Kidney	805
Postnatal Growth of the Kidney	806
The Ureter	807
The Urinary Bladder	808
The Urethra	808
Innervation of the Urinary System	809
28. THE ENDOCRINE SYSTEM	814
Introduction	814
The Pituitary Gland or Body (<i>Hypophysis Cerebri</i>)	815
Other Parts of the Pituitary Gland	828
The Thyroid Gland	831
Does the Thyroid Gland Provide an Example of a Secluded Antigen	844
The Parathyroid Glands	845
The Adrenal (<i>Suprarenal</i>) Glands	852
Islets of Langerhans	866
The Pineal Body	875
29. THE FEMALE REPRODUCTIVE SYSTEM	884
Introductory Remarks About Sex	884
The Parts of the Female Reproductive System	884
The Ovary: Ovulation and Hormone Secretion	890
The Oviducts	909
The Body and the Fundus of the Uterus	911
The Placenta	917
The Cervix	927
The Mammary Glands (<i>Breasts</i> or <i>Mammae</i>)	934
30. THE MALE REPRODUCTIVE SYSTEM	946
The Parts of the System and Their Functions	946
The Testes	949
The Epididymis	964
The Ductus Deferens	965
The Seminal Vesicles	965
The Prostate Gland	966
The Penis	969
The Male Urethra	971
31. THE SYSTEM OF SENSORY RECEPTORS	975
Introduction	975
Receptors Concerned in Cutaneous and Deep Sensibility	975
The Olfactory Organ	978
The Eye	981
Taste Buds	1006
The Ear	1007
INDEX	1025
