<b>1. History and Scope of the Science of Immunology . . . . .</b>	<b>1</b>
Infectious Diseases and Methods of Immunization . . . . .	1
Immunoematology . . . . .	2
Transplantation Immunity . . . . .	2
Allergic and Anaphylactic Reactions . . . . .	4
Autoimmune Diseases . . . . .	5
Immunodeficiency Diseases . . . . .	5
Cancer and Immunoproliferative Disorders . . . . .	7
Immunology and Aging . . . . .	8
The Use of Immunologic Techniques Outside of Immunology . . . . .	8
Summary . . . . .	9
<b>2. Developmental Aspects of the Immune System . . . . .</b>	<b>11</b>
Organization of the Immune System . . . . .	11
B Lymphocyte Development . . . . .	12
T Lymphocyte Development . . . . .	16
Phylogeny . . . . .	16
Elements of the Immune System . . . . .	17
Summary . . . . .	25
<b>3. Antigens and Immunogens . . . . .</b>	<b>28</b>
Basic Definitions . . . . .	28
What Kinds of Substances Are Good Immunogens? . . . . .	28
Antigenic Determinant, Valence, and Immunodominant Group . . . . .	30
Immunization and the Immune Response . . . . .	32
Chemical Nature and Physical State of Antigen and Antigen Processing . . . . .	35
Adjuvants . . . . .	37
Route of Injection . . . . .	38
Antigens and the Immune Response . . . . .	40

Exogenous Microbial Antigens . . . . .	41
Endogenous Antigens . . . . .	42
<b>4. Immunoglobulins and Antibody Formation . . . . .</b>	<b>51</b>
Structure and Properties of Immunoglobulins . . . . .	51
Allotypic Markers of Human Immunoglobulins . . . . .	59
Theories of Antibody Formation: Generation of Antibody Diversity . . . . .	60
Antibody Production. . . . .	63
Functioning Immunoresponsiveness/Triggering B Cells . . . . .	70
Two-Signal Model of Induction of Immune Responses. . . . .	74
Mobility of Lymphocyte Surface Antigens and Receptors . . . . .	77
Immunoglobulin Levels . . . . .	77
Biologic Functions of Human Immunoglobulins. . . . .	80
Pathologic Counterparts of Human Immunoglobulins . . . . .	82
<b>5. Complement . . . . .</b>	<b>93</b>
Activation of Complement System Pathways . . . . .	93
Complement Fixation Test . . . . .	102
Biologic Significance. . . . .	103
Interrelation of Three Host Cascade Systems. . . . .	107
Complement Deficiencies. . . . .	108
<b>6. Immunologic Applications . . . . .</b>	<b>112</b>
Characteristics of the Union of Antibody and Antigen. . . . .	112
Nature of the Forces That Bind Antigen and Antibody . . . . .	113
Specificity of Antigen-Antibody Interactions . . . . .	115
In Vitro Reactions. . . . .	116
Titer . . . . .	117
Applications of Serologic Tests in Diagnosis . . . . .	117
Immune Precipitation Reactions . . . . .	119
Variations of the Precipitin Test . . . . .	122
The Agglutination Reaction . . . . .	133
Complement Fixation . . . . .	137
Tissue Typing . . . . .	138
Lymphocyte Transformation . . . . .	139

<b>7. Cellular Immunity</b> . . . . .	<b>141</b>
Functions and Markers Present on Murine T Cell Subpopulations . . . . .	141
Human T Cell Subpopulations . . . . .	143
Antigen-Specific T Cell Receptors . . . . .	144
Transferability of Cell-Mediated Immunity . . . . .	145
Induction of Cell-Mediated Immunity . . . . .	146
Cell-Mediated Immune Responses . . . . .	148
Lymphokines . . . . .	149
In Vivo Assays to Measure Cell-Mediated Immunity . . . . .	152
In Vitro Assays for Cell-Mediated Immunity . . . . .	154
<b>8. Immunocompetence and Immunoregulation</b> . . . . .	<b>160</b>
Requirements for Immunocompetence . . . . .	161
Immunologic Unresponsiveness . . . . .	164
Physiology and Competence . . . . .	167
Acquired Immunologic Nonresponsiveness . . . . .	168
Immunodeficiency Diseases . . . . .	168
<b>9. Mechanisms of Immunologic Injury</b> . . . . .	<b>176</b>
Type I—Anaphylactic-type Injury . . . . .	176
Type II—Cytotoxic-type Injury . . . . .	181
Type III—Immune Complex-Mediated Injury . . . . .	188
Type IV—Cell-Mediated (Delayed-type Hypersensitivity) Injury . . . . .	193
Antibody-Mediated Stimulation as a Mechanism of Immune Injury . . . . .	195
Shwartzman-Sanarelli Reaction . . . . .	195
Skin Test Responses . . . . .	197
<b>10. Autoimmunity</b> . . . . .	<b>200</b>
Possible Etiologic Mechanisms of Autoimmune Disease . . . . .	202
Microbial Agents as Inducers of Autoimmunity . . . . .	203
Slow Viruses and Autoimmunity . . . . .	203
Infection, Autoimmunity, and Oncogenesis . . . . .	210
Drug-Induced Autoimmunity . . . . .	213
<b>11. Transplantation</b> . . . . .	<b>217</b>
Mechanisms of Graft Rejection . . . . .	217
Allograft Rejection . . . . .	218
Xenograft Rejection . . . . .	221

The Genetics of Transplantation . . . . .	222
The HLA Major Histocompatibility Complex . . . . .	225
Biochemical Structure of HLA Antigens . . . . .	228
Cell Interactions and MHC-Determined Antigens . . . . .	228
Typing and Clinical Transplantation . . . . .	228
HLA and Disease . . . . .	229
Graft versus Host Reactions . . . . .	231
Clinical Transplantation . . . . .	233
The Fetus as a Transplant . . . . .	234
<b>12. Immunobiology of Cancer . . . . .</b>	<b>240</b>
Normal versus Abnormal Growth . . . . .	240
Histologic and Cytologic Characteristics of Cancer . . . . .	241
Nuclear and Chromosomal Abnormalities . . . . .	241
Biochemical Characteristics of Cancerous Cells . . . . .	242
Changes in Cell Membranes of Cancerous Cells . . . . .	243
Classification of Cancers . . . . .	244
Etiologic and Pathogenic Characteristics of Cancer . . . . .	246
Interrelationships between Immunology and Oncogenesis . . . . .	247
Host Responses to Tissue Antigens . . . . .	250
<b>13. Host-parasite Interactions and Protective Host   Immunity . . . . .</b>	<b>256</b>
Virulence . . . . .	256
The Host as a Favorable Microenvironment . . . . .	259
Establishing Virulence and Measurement of Virulence . . . . .	262
Dissemination of Microorganisms within the Host . . . . .	263
Host Defense Mechanisms . . . . .	264
Classification of Immunity . . . . .	269
Localization and Persistence of Microorganisms within the Host . . . . .	270
Microbial Virulence Factors . . . . .	276
Aging, Infection, and Immunity . . . . .	279
Viruses, Immunosuppression, and Autoimmunity . . . . .	281
Bacteria and Fungi as Inducers of Immunosuppression . . . . .	282
Helminths and Immunosuppression . . . . .	283

CONTENTS

xiii

Infection and Immunodeficiency Disease . . . . .	284
Protective Host Immunity . . . . .	290
Viruses, Latency, and Immunopathology . . . . .	297
<b>14. Manipulations of the Immune Response . . . . .</b>	<b>301</b>
Vaccination . . . . .	301
Types of Vaccines Currently in Use . . . . .	301
Vaccination Regimens and Considerations . . . . .	308
Experimental Manipulations of Immune Response . . . . .	315
Physical and Chemical Manipulations of the Immune Response . . . . .	318
Cytotoxic Chemotherapeutic Immunosuppressive Agents . . . . .	319
<b>Index . . . . .</b>	<b>323</b>
